Accounting officer's Responsibilities and Approval

The accounting officer is required by the Municipal Finance Management Act (Act 56 of 2003), to maintain adequate accounting records and is responsible for the content and integrity of the annual financial statements and related financial information included in this report. It is the responsibility of the accounting officer to ensure that the annual financial statements fairly present the state of affairs of the municipality as at the end of the financial year and the results of its operations and cash flows for the period then ended. The external auditors are engaged to express an independent opinion on the annual financial statements and was given unrestricted access to all financial records and related data.

The annual financial statements have been prepared in accordance with Standards of Generally Recognised Accounting Practice (GRAP) including any interpretations, guidelines and directives issued by the Accounting Standards Board.

The annual financial statements are based upon appropriate accounting policies consistently applied and supported by reasonable and prudent judgements and estimates.

The accounting officer acknowledges that he is ultimately responsible for the system of internal financial control established by the municipality and place considerable importance on maintaining a strong control environment. To enable the accounting officer to meet these responsibilities, the sets standards for internal control aimed at reducing the risk of error or deficit in a cost effective manner. The standards include the proper delegation of responsibilities within a clearly defined framework, effective accounting procedures and adequate segregation of duties to ensure an acceptable level of risk. These controls are monitored throughout the municipality and all employees are required to maintain the highest ethical standards in ensuring the municipality's business is conducted in a manner that in all reasonable circumstances is above reproach. The focus of risk management in the municipality is on identifying, assessing, managing and monitoring all known forms of risk across the municipality. While operating risk cannot be fully eliminated, the municipality endeavours to minimise it by ensuring that appropriate infrastructure, controls, systems and ethical behaviour are applied and managed within predetermined procedures and constraints.

The annual financial statements set out on pages 5 to 73, which have been prepared on the going concern basis, were approved by the on 31 August 2015 and were signed on its behalf by:

Mr. S. Tantsi Municipal Manager

Butterworth Monday, August 31, 2015

Annual Financial Statements for the year ended June 30, 2015

Auditor's Report

The accounting officer submits his report for the year ended June 30, 2015.

1. Review of activities

Main business and operations

2. Going concern

The annual financial statements have been prepared on the basis of accounting policies applicable to a going concern. This basis presumes that funds will be available to finance future operations and that the realisation of assets and settlement of liabilities, contingent obligations and commitments will occur in the ordinary course of business.

3. Subsequent events

The accounting officer is not aware of any matter or circumstance arising since the end of the financial year.

4. Accounting policies

The annual financial statements prepared in accordance with the South African Statements of Generally Recognised Accounting Practice (GRAP), including any interpretations of such Statements issued by the Accounting Standards Board.

5.

The accounting officer of the municipality during the year and to the date of this report is as follows:

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1. Presentation of Annual Financial Statements

The annual financial statements have been prepared in accordance with the Standards of Generally Recognised Accounting Practice (GRAP), including any interpretations, guidelines and directives, issued by the Accounting Standards Board in accordance with Section 122(3) of the Municipal Finance Management Act (Act 56 of 2003).

These annual financial statements have been prepared on an accrual basis of accounting and are in accordance with historical cost convention as the basis of measurement, unless specified otherwise. They are presented in South African Rand.

A summary of the significant accounting policies, which have been consistently applied in the preparation of these annual financial statements, are disclosed below.

These accounting policies are consistent with the previous year.

1.1 Presentation currency

These annual financial statements are presented in South African Rand, which is the functional currency of the municipality.

1.2 Going concern assumption

These annual financial statements have been prepared based on the expectation that the municipality will continue to operate as a going concern for at least the next 12 months.

1.3 Significant judgements and sources of estimation uncertainty

In preparing the annual financial statements, management is required to make estimates and assumptions that affect the amounts represented in the annual financial statements and related disclosures. Use of available information and the application of judgement is inherent in the formation of estimates. Actual results in the future could differ from these estimates which may be material to the annual financial statements. Significant judgements include:

Trade receivables

The municipality assesses its trade receivables and loans and receivables for impairment at the end of each reporting period. In determining whether an impairment loss should be recorded in surplus or deficit, the surplus the municipality makes judgements as to whether there is observable data indicating a measurable decrease in the estimated future cash flows from a financial asset.

The impairment of consumer debtors and other trade receivables exists predominantly due to the possibility that these debts will not be recovered. Receivables were assessed individually and grouped together where applicable at the Statement of Financial Position as financial assets with similar credit risk characteristics and collectively assessed for impairment.

In determining this allowance estimates are made about the probability of recovery of the debtors based on their past payment history and risk profile. The Impairment was calculated after grouping all the financial assets of similar nature and risk ratings and by calculating the historical payment ratios for the groupings and by assuming that the future payment ratios would be similar to the historical payment ratios.

In determining the recoverability of receivables from non-exchange and receivables from exchange transactions, the municipality considers any change in the credit quality of the debtor from the date credit was initially granted up to the reporting date. The concentration of credit risk is limited due to the customer base being large and unrelated. Accordingly, the management believe that there is no further credit provision required in excess of the debtors impairment.

Fair value estimation

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.3 Significant judgements and sources of estimation uncertainty (continued)

Impairment testing (Cash and non-cash generating units)

The recoverable service amounts of cash-generating units and individual assets have been determined based on the higher of value in use calculations and fair values less costs to sell. These calculations require the use of estimates and assumptions.

The municipality reviews and tests the carrying value of assets when events or changes in circumstances suggest that the carrying amount may not be recoverable. Assets are grouped at the lowest level for which identifiable cash flows are largely independent of cash flows of other assets and liabilities. If there are indications that impairment may have occurred, estimates are prepared of expected future cash flows for each group of assets. Expected future cash flows used to determine the value in use of goodwill and tangible assets are inherently uncertain and could materially change over time. They are significantly affected by a number of factors .

Provisions

Provisions were raised and management determined an estimate based on the information available. Additional disclosure of these estimates of provisions are included in note 16 - Provisions.

Useful lives of property plant and equipment and other assets

The municipality's management determines the estimated useful lives and related depreciation charges of property plant and equipment and other assets. This estimate is based on industry norm. This estimate is based on the pattern in which an assets future economic benefits or service potential are expected to be consumed by the municipality.

Post retirement benefits

The most appropriate discount rate that reflects the time value of money is with reference to the market yield at the reporting date on government bonds. Where there is no deep market in government bonds with sufficiently long maturity to match the estimated maturity of all the benefit payments, the municipality uses current market market rates of the appropriate term to discount shorter term payments, and estimates the discount rate for longer maturities by extrapolating current market rates along the yield curve.

Effective interest rate

The municipality used the prime interest rate to discount future cash flows.

Receivables

On debtors an impairment loss is recognised in surplus and deficit when there is objective evidence that it is impaired. The impairment is measured as the difference between the debtors carrying amount and the present value of estimated future cash flows discounted at the effective interest rate, computed at initial recognition.

1.4 Investment property

Investment property is property (land or a building - or part of a building - or both) held to earn rentals or for capital appreciation or both, rather than for:

use in the production or supply of goods or services or for administrative purposes, or sale in the ordinary course of operations.

Owner-occupied property is property held for use in the production or supply of goods or services or for administrative purposes.

Investment property is recognised as an asset when, it is probable that the future economic benefits or service potential that are associated with the investment property will flow to the municipality, and the cost or fair value of the investment property can be measured reliably.

Investment property is initially recognised at cost. Transaction costs are included in the initial measurement.

Where investment property is acquired through a non-exchange transaction, its cost is its fair value as at the date of acquisition.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.4 Investment property (continued)

Costs include costs incurred initially and costs incurred subsequently to add to, or to replace a part of, or service a property. If a replacement part is recognised in the carrying amount of the investment property, the carrying amount of the replaced part is derecognised.

Cost model

Investment property is carried at cost less accumulated depreciation and any accumulated impairment losses.

Depreciation is provided to write down the cost, less estimated residual value by equal installments over the useful life of the property, which is as follows:

ItemUseful lifeProperty - landindefiniteProperty - buildings5-100 years

Investment property is derecognised on disposal or when the investment property is permanently withdrawn from use and no future economic benefits or service potential are expected from its disposal.

Gains or losses arising from the retirement or disposal of investment property is the difference between the net disposal proceeds and the carrying amount of the asset and is recognised in surplus or deficit in the period of retirement or disposal.

Compensation from third parties for investment property that was impaired, lost or given up is recognised in surplus or deficit when the compensation becomes receivable.

The municipality has land and buildings, including vacant land that is classified as investment property. In terms of the Local Government Municipal Properties Rates Act of 2004, the municipality is required to perform general valuation once every four (4) years. The investment property held in the books of the municipality is not actively traded as the mandate of the municipality also includes local economic development. As such properties may be earmarked for local economic development. Thus, their trade value will be based on the proposal that impacts positively on economic growth. Therefore fair value cannot be measured reliably at each reporting date.

1.5 Property, plant and equipment

Property, plant and equipment are tangible non-current assets (including infrastructure assets) that are held for use in the production or supply of goods or services, rental to others, or for administrative purposes, and are expected to be used during more than one reporting period.

The cost of an item of property, plant and equipment is recognised as an asset when:

it is probable that future economic benefits or service potential associated with the item will flow to the municipality; and

the cost or fair value of the item can be measured reliably.

Property, plant and equipment is initially measured at cost.

The cost of an item of property, plant and equipment is the purchase price and other costs attributable to bring the asset to the location and condition necessary for it to be capable of operating in the manner intended by management. Trade discounts and rebates are deducted in arriving at the cost.

Where an asset is acquired through a non-exchange transaction, its cost is its fair value as at date of acquisition.

Where an item of property, plant and equipment is acquired in exchange for a non-monetary asset or assets, or a combination of assets and non-monetary assets, the asset acquired is initially measured at fair value (the cost). If the acquired item's fair value was not determinable, it's deemed cost is the carrying amount of the asset(s) given up.

The initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located is also included in the cost of property, plant and equipment, where the entity is obligated to incur such expenditure, and where the obligation arises as a result of acquiring the asset or using it for purposes other than the production of inventories.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.5 Property, plant and equipment (continued)

Recognition of costs in the carrying amount of an item of property, plant and equipment ceases when the item is in the location and condition necessary for it to be capable of operating in the manner intended by management.

When significant components of an item of property, plant and equipment have different useful lives, they are accounted for as separate items (major components) of property, plant and equipment.

Costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it. If a replacement cost is recognised in the carrying amount of an item of property, plant and equipment, the carrying amount of the replaced part is derecognised.

Major spare parts and stand by equipment which are expected to be used for more than one period are included in property, plant and equipment. In addition, spare parts and stand by equipment which can only be used in connection with an item of property, plant and equipment are accounted for as property, plant and equipment.

Subsequent measurement

After initial recognition, infrastructure, community assets and operational buildings are measured using the revaluation method.

Revaluations are made with sufficient regularity such that the carrying amount does not differ materially from that which would be determined using fair value at the end of the reporting period. When an asset is revalued, any accumulated depreciation at the date of the revaluation is restated proportionately with the change in the gross carrying amount of the asset so that the carrying amount of the asset after revaluation equals its revalued amount.

Any increase in an asset's carrying amount, as a result of a revaluation, is credited directly to a revaluation surplus. The increase is recognised in surplus or deficit to the extent that it reverses a revaluation decrease of the same asset previously recognised in surplus or deficit.

Any decrease in an asset's carrying amount, as a result of a revaluation, is recognised in surplus or deficit in the current period. The decrease is debited directly to a revaluation surplus to the extent of any credit balance existing in the revaluation surplus in respect of that asset.

The revaluation surplus in equity relating to a specific item infrastructure, community assets and operational buildings is transferred directly to retained earnings when the asset is derecognised.

Property, plant and equipment are depreciated on the straight line basis over their expected useful lives to their estimated residual value.

The useful lives of items of property, plant and equipment have been assessed as follows:

item	Average usetui lite
Infrastructure	
Roads and stormwater	5-100 Years
Community Assets	
Buildings	15-60 Years
Recreational Facilities	15-80 Years
Security	5 Years
Halls	5-80 Years
Libraries	7-60 Years
Parks and Gardens	15-80 Years
Other Assets	20-30 Years

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.5 Property, plant and equipment (continued)

Other Property, Plant and Equipment **Buildings** 30-60 Years Specialised Vehicles 5-10 Years Other Vehicles 3-5 Years Office Equipment 3-16 Years Furniture and Fittings 3-23 Years Watercraft 5-15 Years Bins and Containers 3-5 Years Specialised Plant and Equipment 10-15 Years Other Items of Property Plant and Equipment 5-23 Years Computer Equipment 2-3 Years Plant and Machinery 5-31 Years

Finance Lease

Landfill Site

Motor Vehicles 4-27 Years
Office Equipment 4-27 Years

The residual value, the useful life and depreciation method of each asset are reviewed at least at each reporting date. If the expectations differ from previous estimates, the change is accounted for as a change in accounting estimate.

20-50 Years

Reviewing the useful life of an asset on an annual basis does not require the entity to amend the previous estimate unless expectations differ from the previous estimate.

Each part of an item of property, plant and equipment with a cost that is significant in relation to the total cost of the item is depreciated separately.

The depreciation charge for each period is recognised in surplus or deficit unless it is included in the carrying amount of another asset.

Items of property, plant and equipment are derecognised when the asset is disposed of or when there are no further economic benefits or service potential expected from the use or disposal of the asset.

The gain or loss arising from the derecognition of an item of property, plant and equipment is included in surplus or deficit when the item is derecognised. The gain or loss arising from the derecognition of an item of property, plant and equipment is determined as the difference between the net disposal proceeds, if any, and the carrying amount of the item.

Compensation from third parties for property plant and equipment that was impaired, lost or given up is recognised in surplus or deficit when compensation becomes receivable.

1.6 Site restoration and dismantling cost

The municipality has an obligation to dismantle, remove and restore items of property, plant and equipment. Such obligations are referred to as 'decommissioning, restoration and similar liabilities'. The cost of an item of property, plant and equipment includes the initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located, the obligation for which an municipality incurs either when the item is acquired or as a consequence of having used the item during a particular period for purposes other than to produce inventories during that period.

If the related asset is measured using the cost model:

- (a) subject to (b), changes in the liability are added to, or deducted from, the cost of the related asset in the current period;
- (b) if a decrease in the liability exceeds the carrying amount of the asset, the excess is recognised immediately in surplus or deficit; and
- (c) if the adjustment results in an addition to the cost of an asset, the municipality considers whether this is an indication that the new carrying amount of the asset may not be fully recoverable. If it is such an indication, the asset is tested for impairment by estimating its recoverable amount or recoverable service amount, and any impairment loss is recognised in accordance with the accounting policy on impairment of cash-generating assets and/or impairment of non-cash-generating assets.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.7 Intangible assets

An asset is identifiable if it either:

is separable, i.e. is capable of being separated or divided from an entity and sold, transferred, licensed, rented or exchanged, either individually or together with a related contract, identifiable assets or liability, regardless of whether the entity intends to do so; or

arises from binding arrangements (including rights from contracts), regardless of whether those rights are transferable or separable from the municipality or from other rights and obligations.

An intangible asset is recognised when:

it is probable that the expected future economic benefits or service potential that are attributable to the asset will flow to the municipality; and

the cost or fair value of the asset can be measured reliably.

Intangible assets are initially recognised at cost.

Where an intangible asset is acquired through a non-exchange transaction, its initial cost at the date of acquisition is measured at its fair value as at that date.

Intangible assets are carried at cost less any accumulated amortisation and any impairment losses.

An intangible asset is regarded as having an indefinite useful life when, based on all relevant factors, there is no foreseeable limit to the period over which the asset is expected to generate net cash inflows or service potential. Amortisation is not provided for these intangible assets, but they are tested for impairment annually and whenever there is an indication that the asset may be impaired. For all other intangible assets amortisation is provided on a straight line basis over their useful life.

The amortisation period and the amortisation method for intangible assets are reviewed at each reporting date.

Reassessing the useful life of an intangible asset with a finite useful life after it was classified as indefinite is an indicator that the asset may be impaired. As a result the asset is tested for impairment and the remaining carrying amount is amortised over its useful life.

Amortisation is provided to write down the intangible assets, on a straight line basis, to their residual values as follows:

ItemUseful lifeComputer software, other5 years

Intangible assets are derecognised:

on disposal; or

when no future economic benefits or service potential are expected from its use or disposal.

The gain or loss is the difference between the net disposal proceeds, if any, and the carrying amount. It is recognised in surplus or deficit when the asset is derecognised.

1.8 Financial instruments

A financial instrument is any contract that gives rise to a financial asset of one municipality and a financial liability or a residual interest of another municipality.

The amortised cost of a financial asset or financial liability is the amount at which the financial asset or financial liability is measured at initial recognition minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount, and minus any reduction (directly or through the use of an allowance account) for impairment or uncollectibility.

A concessionary loan is a loan granted to or received by the municipality on terms that are not market related.

Credit risk is the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.

Currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.8 Financial instruments (continued)

Derecognition is the removal of a previously recognised financial asset or financial liability from the municipality's statement of financial position.

A derivative is a financial instrument or other contract with all three of the following characteristics:

Its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract (sometimes called the 'underlying'). It requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors. It is settled at a future date.

The effective interest method is a method of calculating the amortised cost of a financial asset or a financial liability (or group of financial assets or financial liabilities) and of allocating the interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the municipality shall estimate cash flows considering all contractual terms of the financial instrument (for example, prepayment, call and similar options) but shall not consider future credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate (see the Standard of GRAP on Revenue from Exchange Transactions), transaction costs, and all other premiums or discounts. There is a presumption that the cash flows and the expected life of a group of similar financial instruments can be estimated reliably. However, in those rare cases when it is not possible to reliably estimate the cash flows or the expected life of a financial instrument (or group of financial instruments), the municipality shall use the contractual cash flows over the full contractual term of the financial instrument (or group of financial instruments).

Fair value is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable willing parties in an arm's length transaction.

A financial asset is:

cash;

a residual interest of another municipality; or

a contractual right to:

- receive cash or another financial asset from another municipality; or
- exchange financial assets or financial liabilities with another municipality under conditions that are potentially favourable to the municipality.

A financial guarantee contract is a contract that requires the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument.

A financial liability is any liability that is a contractual obligation to:

deliver cash or another financial asset to another municipality; or

exchange financial assets or financial liabilities under conditions that are potentially unfavourable to the municipality.

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

Liquidity risk is the risk encountered by the municipality in the event of difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset.

Loan commitment is a firm commitment to provide credit under pre-specified terms and conditions.

Loans payable are financial liabilities, other than short-term payables on normal credit terms.

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: currency risk, interest rate risk and other price risk.

Other price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer, or factors affecting all similar financial instruments traded in the market.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.8 Financial instruments (continued)

A financial asset is past due when a counterparty has failed to make a payment when contractually due.

A residual interest is any contract that manifests an interest in the assets of the municipality after deducting all of its liabilities. A residual interest includes contributions from owners, which may be shown as:

equity instruments or similar forms of unitised capital;

a formal designation of a transfer of resources (or a class of such transfers) by the parties to the transaction as forming part of an municipality's net assets, either before the contribution occurs or at the time of the contribution; or a formal agreement, in relation to the contribution, establishing or increasing an existing financial interest in the net assets of an municipality.

Transaction costs are incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability. An incremental cost is one that would not have been incurred if the municipality had not acquired, issued or disposed of the financial instrument.

Financial instruments at amortised cost are non-derivative financial assets or non-derivative financial liabilities that have fixed or determinable payments, excluding those instruments that:

the municipality designates at fair value at initial recognition; or are held for trading.

Financial instruments at cost are investments in residual interests that do not have a quoted market price in an active market, and whose fair value cannot be reliably measured.

Financial instruments at fair value comprise financial assets or financial liabilities that are:

derivatives:

combined instruments that are designated at fair value;

instruments held for trading. A financial instrument is held for trading if:

- it is acquired or incurred principally for the purpose of selling or repurchasing it in the near-term; or
- on initial recognition it is part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short term profit-taking;
- non-derivative financial assets or financial liabilities with fixed or determinable payments that are designated at fair value at initial recognition; and
- financial instruments that do not meet the definition of financial instruments at amortised cost or financial instruments at cost.

Classification

The municipality has the following types of financial assets (classes and category) as reflected on the face of the statement of financial position or in the notes thereto:

Financial asset

Receivables from exchange transactions Receivables from non-exchange transactions Bank, cash and cash equivalents

Classification in terms of GRAP 104

Financial asset measured at amortised cost Financial asset measured at amortised cost Financial asset measured at amortised cost

The entity has the following types of financial liabilities (classes and category) as reflected on the face of the statement of financial position or in the notes thereto:

Financial liability

Trade payables Finance lease

Classification in terms of GRAP 104

Financial liability measured at amortised cost Financial liability measured at amortised cost

Initial recognition

The municipality recognises a financial asset or a financial liability in its statement of financial position when the municipality becomes a party to the contractual provisions of the instrument.

The municipality recognises financial assets using trade date accounting.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.8 Financial instruments (continued)

Initial measurement of financial assets and financial liabilities

The municipality measures a financial asset and financial liability initially at its fair value plus transaction costs that are directly attributable to the acquisition or issue of the financial asset or financial liability.

Subsequent measurement of financial assets and financial liabilities

The municipality measures all financial assets and financial liabilities after initial recognition using the following categories:

Financial instruments at amortised cost.

All financial assets measured at amortised cost, or cost, are subject to an impairment review.

Fair value measurement considerations

The best evidence of fair value is quoted prices in an active market. If the market for a financial instrument is not active, the municipality establishes fair value by using a valuation technique. The objective of using a valuation technique is to establish what the transaction price would have been on the measurement date in an arm's length exchange motivated by normal operating considerations. Valuation techniques include using recent arm's length market transactions between knowledgeable, willing parties, if available, reference to the current fair value of another instrument that is substantially the same, discounted cash flow analysis and option pricing models. If there is a valuation technique commonly used by market participants to price the instrument and that technique has been demonstrated to provide reliable estimates of prices obtained in actual market transactions, the entity uses that technique. The chosen valuation technique makes maximum use of market inputs and relies as little as possible on entity-specific inputs. It incorporates all factors that market participants would consider in setting a price and is consistent with accepted economic methodologies for pricing financial instruments. Periodically, the municipality calibrates the valuation technique and tests it for validity using prices from any observable current market transactions in the same instrument (i.e. without modification or repackaging) or based on any available observable market data.

The fair value of a financial liability with a demand feature (e.g. a demand deposit) is not less than the amount payable on demand, discounted from the first date that the amount could be required to be paid.

Short-term receivables and payables are not discounted where the initial credit period granted or received is consistent with terms used in the public sector, either through established practices or legislation.

Gains and losses

A gain or loss arising from a change in the fair value of a financial asset or financial liability measured at fair value is recognised in surplus or deficit.

For financial assets and financial liabilities measured at amortised cost or cost, a gain or loss is recognised in surplus or deficit when the financial asset or financial liability is derecognised or impaired, or through the amortisation process.

Impairment and uncollectibility of financial assets

The carrying amount of the asset is reduced through the use of an allowance account and the previously recognised impairment loss is reversed by adjusting the allowance account.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.8 Financial instruments (continued)

Derecognition

Financial assets

The municipality derecognises financial assets using trade date accounting.

The municipality derecognises a financial asset only when:

the contractual rights to the cash flows from the financial asset expire, are settled or waived;

the municipality transfers to another party substantially all of the risks and rewards of ownership of the financial asset; or

the municipality, despite having retained some significant risks and rewards of ownership of the financial asset, has transferred control of the asset to another party and the other party has the practical ability to sell the asset in its entirety to an unrelated third party, and is able to exercise that ability unilaterally and without needing to impose additional restrictions on the transfer. In this case, the municipality:

- derecognise the asset; and
- recognise separately any rights and obligations created or retained in the transfer.

The carrying amounts of the transferred asset are allocated between the rights or obligations retained and those transferred on the basis of their relative fair values at the transfer date. Newly created rights and obligations are measured at their fair values at that date. Any difference between the consideration received and the amounts recognised and derecognised is recognised in surplus or deficit in the period of the transfer.

If the municipality transfers a financial asset in a transfer that qualifies for derecognition in its entirety and retains the right to service the financial asset for a fee, it recognise either a servicing asset or a servicing liability for that servicing contract. If the fee to be received is not expected to compensate the entity adequately for performing the servicing, a servicing liability for the servicing obligation is recognised at its fair value. If the fee to be received is expected to be more than adequate compensation for the servicing, a servicing asset is recognised for the servicing right at an amount determined on the basis of an allocation of the carrying amount of the larger financial asset.

If, as a result of a transfer, a financial asset is derecognised in its entirety but the transfer results in the entity obtaining a new financial asset or assuming a new financial liability, or a servicing liability, the entity recognise the new financial asset, financial liability or servicing liability at fair value.

On derecognition of a financial asset in its entirety, the difference between the carrying amount and the sum of the consideration received is recognised in surplus or deficit.

If the transferred asset is part of a larger financial asset and the part transferred qualifies for derecognition in its entirety, the previous carrying amount of the larger financial asset is allocated between the part that continues to be recognised and the part that is derecognised, based on the relative fair values of those parts, on the date of the transfer. For this purpose, a retained servicing asset is treated as a part that continues to be recognised. The difference between the carrying amount allocated to the part derecognised and the sum of the consideration received for the part derecognised is recognised in surplus or deficit.

If a transfer does not result in derecognition because the municipality has retained substantially all the risks and rewards of ownership of the transferred asset, the municipality continue to recognise the transferred asset in its entirety and recognise a financial liability for the consideration received. In subsequent periods, the municipality recognises any revenue on the transferred asset and any expense incurred on the financial liability. Neither the asset, and the associated liability nor the revenue, and the associated expenses are offset.

Financial liabilities

The municipality removes a financial liability (or a part of a financial liability) from its statement of financial position when it is extinguished — i.e. when the obligation specified in the contract is discharged, cancelled, expires or waived.

An exchange between an existing borrower and lender of debt instruments with substantially different terms is accounted for as having extinguished the original financial liability and a new financial liability is recognised. Similarly, a substantial modification of the terms of an existing financial liability or a part of it is accounted for as having extinguished the original financial liability and having recognised a new financial liability.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.8 Financial instruments (continued)

The difference between the carrying amount of a financial liability (or part of a financial liability) extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognised in surplus or deficit. Any liabilities that are waived, forgiven or assumed by another municipality by way of a non-exchange transaction are accounted for in accordance with the Standard of GRAP on Revenue from Non-exchange Transactions (Taxes and Transfers).

Presentation

Interest relating to a financial instrument or a component that is a financial liability is recognised as revenue or expense in surplus or deficit.

Losses and gains relating to a financial instrument or a component that is a financial liability is recognised as revenue or expense in surplus or deficit.

A financial asset and a financial liability are only offset and the net amount presented in the statement of financial position when the municipality currently has a legally enforceable right to set off the recognised amounts and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

In accounting for a transfer of a financial asset that does not qualify for derecognition, the municipality does not offset the transferred asset and the associated liability.

1.9 Leases

A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to ownership. A lease is classified as an operating lease if it does not transfer substantially all the risks and rewards incidental to ownership.

When a lease includes both land and buildings elements, the entity assesses the classification of each element separately.

Finance leases - lessee

Finance leases are recognised as assets and liabilities in the statement of financial position at amounts equal to the fair value of the leased property or, if lower, the present value of the minimum lease payments. The corresponding liability to the lessor is included in the statement of financial position as a finance lease obligation.

The discount rate used in calculating the present value of the minimum lease payments is the interest rate implicit in the lease.

Minimum lease payments are apportioned between the finance charge and reduction of the outstanding liability. The finance charge is allocated to each period during the lease term so as to produce a constant periodic rate of on the remaining balance of the liability.

Any contingent rents are expensed in the period in which they are incurred.

Operating leases - lessee

Operating lease payments are recognised as an expense on a straight-line basis over the lease term. The difference between the amounts recognised as an expense and the contractual payments are recognised as an operating lease asset or liability.

1.10 Inventories

Inventories are initially measured at cost except where inventories are acquired through a non-exchange transaction, then their costs are their fair value as at the date of acquisition.

Subsequently inventories are measured at the lower of cost and net realisable value.

Inventories are measured at the lower of cost and current replacement cost where they are held for;

distribution at no charge or for a nominal charge; or

consumption in the production process of goods to be distributed at no charge or for a nominal charge.

Net realisable value is the estimated selling price in the ordinary course of operations less the estimated costs of completion and the estimated costs necessary to make the sale, exchange or distribution.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.10 Inventories (continued)

Current replacement cost is the cost the municipality incurs to acquire the asset on the reporting date.

The cost of inventories comprises of all costs of purchase, costs of conversion and other costs incurred in bringing the inventories to their present location and condition.

The cost of inventories of items that are not ordinarily interchangeable and goods or services produced and segregated for specific projects is assigned using specific identification of the individual costs.

The cost of inventories is assigned using the weighted average cost formula. The same cost formula is used for all inventories having a similar nature and use to the municipality.

When inventories are sold, the carrying amounts of those inventories are recognised as an expense in the period in which the related revenue is recognised. If there is no related revenue, the expenses are recognised when the goods are distributed, or related services are rendered. The amount of any write-down of inventories to net realisable value or current replacement cost and all losses of inventories are recognised as an expense in the period the write-down or loss occurs. The amount of any reversal of any write-down of inventories, arising from an increase in net realisable value or current replacement cost, are recognised as a reduction in the amount of inventories recognised as an expense in the period in which the reversal occurs.

1.11 Impairment of cash-generating assets

Cash-generating assets are those assets held by the municipality with the primary objective of generating a commercial return. When an asset is deployed in a manner consistent with that adopted by a profit-orientated entity, it generates a commercial return.

Impairment is a loss in the future economic benefits or service potential of an asset, over and above the systematic recognition of the loss of the asset's future economic benefits or service potential through depreciation (amortisation).

Carrying amount is the amount at which an asset is recognised in the statement of financial position after deducting any accumulated depreciation and accumulated impairment losses thereon.

A cash-generating unit is the smallest identifiable group of assets held with the primary objective of generating a commercial return that generates cash inflows from continuing use that are largely independent of the cash inflows from other assets or groups of assets.

Costs of disposal are incremental costs directly attributable to the disposal of an asset, excluding finance costs and income tax expense.

Depreciation (Amortisation) is the systematic allocation of the depreciable amount of an asset over its useful life.

Fair value less costs to sell is the amount obtainable from the sale of an asset in an arm's length transaction between knowledgeable, willing parties, less the costs of disposal.

Recoverable amount of an asset or a cash-generating unit is the higher its fair value less costs to sell and its value in use.

Useful life is either:

- (a) the period of time over which an asset is expected to be used by the municipality; or
- (b) the number of production or similar units expected to be obtained from the asset by the municipality.

Identification

When the carrying amount of a cash-generating asset exceeds its recoverable amount, it is impaired.

The municipality assesses at each reporting date whether there is any indication that a cash-generating asset may be impaired. If any such indication exists, the municipality estimates the recoverable amount of the asset.

Irrespective of whether there is any indication of impairment, the municipality also test a cash-generating intangible asset with an indefinite useful life or a cash-generating intangible asset not yet available for use for impairment annually by comparing its carrying amount with its recoverable amount. This impairment test is performed at the same time every year. If an intangible asset was initially recognised during the current reporting period, that intangible asset was tested for impairment before the end of the current reporting period.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.11 Impairment of cash-generating assets (continued)

Value in use

Value in use of a cash-generating asset is the present value of the estimated future cash flows expected to be derived from the continuing use of an asset and from its disposal at the end of its useful life.

When estimating the value in use of an asset, the municipality estimates the future cash inflows and outflows to be derived from continuing use of the asset and from its ultimate disposal and the municipality applies the appropriate discount rate to those future cash flows.

Basis for estimates of future cash flows

In measuring value in use the municipality:

base cash flow projections on reasonable and supportable assumptions that represent management's best estimate of the range of economic conditions that will exist over the remaining useful life of the asset. Greater weight is given to external evidence;

base cash flow projections on the most recent approved financial budgets/forecasts, but excludes any estimated future cash inflows or outflows expected to arise from future restructuring's or from improving or enhancing the asset's performance. Projections based on these budgets/forecasts covers a maximum period of five years, unless a longer period can be justified; and

estimate cash flow projections beyond the period covered by the most recent budgets/forecasts by extrapolating the projections based on the budgets/forecasts using a steady or declining growth rate for subsequent years, unless an increasing rate can be justified. This growth rate does not exceed the long-term average growth rate for the products, industries, or country or countries in which the entity operates, or for the market in which the asset is used, unless a higher rate can be justified.

Composition of estimates of future cash flows

Estimates of future cash flows include:

projections of cash inflows from the continuing use of the asset;

projections of cash outflows that are necessarily incurred to generate the cash inflows from continuing use of the asset (including cash outflows to prepare the asset for use) and can be directly attributed, or allocated on a reasonable and consistent basis, to the asset; and

net cash flows, if any, to be received (or paid) for the disposal of the asset at the end of its useful life.

Estimates of future cash flows exclude:

cash inflows or outflows from financing activities; and income tax receipts or payments.

The estimate of net cash flows to be received (or paid) for the disposal of an asset at the end of its useful life is the amount that the municipality expects to obtain from the disposal of the asset in an arm's length transaction between knowledgeable, willing parties, after deducting the estimated costs of disposal.

Discount rate

The discount rate is a pre-tax rate that reflects current market assessments of the time value of money, represented by the current risk-free rate of interest and the risks specific to the asset for which the future cash flow estimates have not been adjusted.

Recognition and measurement (individual asset)

If the recoverable amount of a cash-generating asset is less than its carrying amount, the carrying amount of the asset is reduced to its recoverable amount. This reduction is an impairment loss.

An impairment loss is recognised immediately in surplus or deficit.

When the amount estimated for an impairment loss is greater than the carrying amount of the cash-generating asset to which it relates, the municipality recognises a liability only to the extent that is a requirement in the Standard of GRAP.

After the recognition of an impairment loss, the depreciation (amortisation) charge for the cash-generating asset is adjusted in future periods to allocate the cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.11 Impairment of cash-generating assets (continued)

Cash-generating units

If there is any indication that an asset may be impaired, the recoverable amount is estimated for the individual asset. If it is not possible to estimate the recoverable amount of the individual asset, the municipality determines the recoverable amount of the cash-generating unit to which the asset belongs (the asset's cash-generating unit).

If an active market exists for the output produced by an asset or group of assets, that asset or group of assets is identified as a cash-generating unit, even if some or all of the output is used internally. If the cash inflows generated by any asset or cash-generating unit are affected by internal transfer pricing, the municipality use management's best estimate of future price(s) that could be achieved in arm's length transactions in estimating:

the future cash inflows used to determine the asset's or cash-generating unit's value in use; and the future cash outflows used to determine the value in use of any other assets or cash-generating units that are affected by the internal transfer pricing.

Cash-generating units are identified consistently from period to period for the same asset or types of assets, unless a change is justified.

The carrying amount of a cash-generating unit is determined on a basis consistent with the way the recoverable amount of the cash-generating unit is determined.

An impairment loss is recognised for a cash-generating unit if the recoverable amount of the unit is less than the carrying amount of the unit. The impairment is allocated to reduce the carrying amount of the cash-generating assets of the unit on a pro rata basis, based on the carrying amount of each asset in the unit. These reductions in carrying amounts are treated as impairment losses on individual assets.

In allocating an impairment loss, the entity does not reduce the carrying amount of an asset below the highest of:

its fair value less costs to sell (if determinable);

its value in use (if determinable); and

zero.

The amount of the impairment loss that would otherwise have been allocated to the asset is allocated pro rata to the other cash-generating assets of the unit.

Where a non-cash-generating asset contributes to a cash-generating unit, a proportion of the carrying amount of that non-cash-generating asset is allocated to the carrying amount of the cash-generating unit prior to estimation of the recoverable amount of the cash-generating unit.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.11 Impairment of cash-generating assets (continued)

Reversal of impairment loss

The municipality assess at each reporting date whether there is any indication that an impairment loss recognised in prior periods for a cash-generating asset may no longer exist or may have decreased. If any such indication exists, the entity estimates the recoverable amount of that asset.

An impairment loss recognised in prior periods for a cash-generating asset is reversed if there has been a change in the estimates used to determine the asset's recoverable amount since the last impairment loss was recognised. The carrying amount of the asset is increased to its recoverable amount. The increase is a reversal of an impairment loss. The increased carrying amount of an asset attributable to a reversal of an impairment loss does not exceed the carrying amount that would have been determined (net of depreciation or amortisation) had no impairment loss been recognised for the asset in prior periods.

A reversal of an impairment loss for a cash-generating asset is recognised immediately in surplus or deficit.

After a reversal of an impairment loss is recognised, the depreciation (amortisation) charge for the cash-generating asset is adjusted in future periods to allocate the cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

A reversal of an impairment loss for a cash-generating unit is allocated to the cash-generating assets of the unit pro rata with the carrying amounts of those assets. These increases in carrying amounts are treated as reversals of impairment losses for individual assets. No part of the amount of such a reversal is allocated to a non-cash-generating asset contributing service potential to a cash-generating unit.

In allocating a reversal of an impairment loss for a cash-generating unit, the carrying amount of an asset is not increased above the lower of:

its recoverable amount (if determinable); and

the carrying amount that would have been determined (net of amortisation or depreciation) had no impairment loss been recognised for the asset in prior periods.

The amount of the reversal of the impairment loss that would otherwise have been allocated to the asset is allocated pro rata to the other assets of the unit.

Redesignation

The redesignation of assets from a cash-generating asset to a non-cash-generating asset or from a non-cash-generating asset to a cash-generating asset only occur when there is clear evidence that such a redesignation is appropriate.

1.12 Impairment of non-cash-generating assets

Cash-generating assets are those assets held by the municipality with the primary objective of generating a commercial return. When an asset is deployed in a manner consistent with that adopted by a profit-orientated entity, it generates a commercial return.

Non-cash-generating assets are assets other than cash-generating assets.

Impairment is a loss in the future economic benefits or service potential of an asset, over and above the systematic recognition of the loss of the asset's future economic benefits or service potential through depreciation (amortisation).

Carrying amount is the amount at which an asset is recognised in the statement of financial position after deducting any accumulated depreciation and accumulated impairment losses thereon.

A cash-generating unit is the smallest identifiable group of assets held with the primary objective of generating a commercial return that generates cash inflows from continuing use that are largely independent of the cash inflows from other assets or groups of assets.

Costs of disposal are incremental costs directly attributable to the disposal of an asset, excluding finance costs and income tax expense.

Depreciation (Amortisation) is the systematic allocation of the depreciable amount of an asset over its useful life.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.12 Impairment of non-cash-generating assets (continued)

Fair value less costs to sell is the amount obtainable from the sale of an asset in an arm's length transaction between knowledgeable, willing parties, less the costs of disposal.

Recoverable service amount is the higher of a non-cash-generating asset's fair value less costs to sell and its value in use.

Useful life is either:

- (a) the period of time over which an asset is expected to be used by the municipality; or
- (b) the number of production or similar units expected to be obtained from the asset by the municipality.

Identification

When the carrying amount of a non-cash-generating asset exceeds its recoverable service amount, it is impaired.

The municipality assesses at each reporting date whether there is any indication that a non-cash-generating asset may be impaired. If any such indication exists, the municipality estimates the recoverable service amount of the asset.

Irrespective of whether there is any indication of impairment, the entity also test a non-cash-generating intangible asset with an indefinite useful life or a non-cash-generating intangible asset not yet available for use for impairment annually by comparing its carrying amount with its recoverable service amount. This impairment test is performed at the same time every year. If an intangible asset was initially recognised during the current reporting period, that intangible asset was tested for impairment before the end of the current reporting period.

Value in use

Value in use of non-cash-generating assets is the present value of the non-cash-generating assets remaining service potential.

The present value of the remaining service potential of a non-cash-generating assets is determined using one of the following approaches, the selection depends on the availability of data and nature of the impairment:

Depreciated replacement cost approach

The present value of the remaining service potential of a non-cash-generating asset is determined as the depreciated replacement cost of the asset. The replacement cost of an asset is the cost to replace the asset's gross service potential. This cost is depreciated to reflect the asset in its used condition. An asset may be replaced either through reproduction (replication) of the existing asset or through replacement of its gross service potential. The depreciated replacement cost is measured as the reproduction or replacement cost of the asset, whichever is lower, less accumulated depreciation calculated on the basis of such cost, to reflect the already consumed or expired service potential of the asset.

The replacement cost and reproduction cost of an asset is determined on an "optimised" basis. The rationale is that the municipality would not replace or reproduce the asset with a like asset if the asset to be replaced or reproduced is an overdesigned or overcapacity asset. Overdesigned assets contain features which are unnecessary for the goods or services the asset provides. Overcapacity assets are assets that have a greater capacity than is necessary to meet the demand for goods or services the asset provides. The determination of the replacement cost or reproduction cost of an asset on an optimised basis thus reflects the service potential required of the asset.

Restoration cost approach

Restoration cost is the cost of restoring the service potential of an asset to its pre-impaired level. The present value of the remaining service potential of the asset is determined by subtracting the estimated restoration cost of the asset from the current cost of replacing the remaining service potential of the asset before impairment. The latter cost is determined as the depreciated reproduction or replacement cost of the asset, whichever is lower.

Service units approach

The present value of the remaining service potential of the asset is determined by reducing the current cost of the remaining service potential of the asset before impairment, to conform to the reduced number of service units expected from the asset in its impaired state. The current cost of replacing the remaining service potential of the asset before impairment is determined as the depreciated reproduction or replacement cost of the asset before impairment, whichever is lower.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.12 Impairment of non-cash-generating assets (continued)

Recognition and measurement

If the recoverable service amount of a non-cash-generating asset is less than its carrying amount, the carrying amount of the asset is reduced to its recoverable service amount. This reduction is an impairment loss.

An impairment loss is recognised immediately in surplus or deficit.

After the recognition of an impairment loss, the depreciation (amortisation) charge for the non-cash-generating asset is adjusted in future periods to allocate the non-cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Reversal of an impairment loss

The municipality assess at each reporting date whether there is any indication that an impairment loss recognised in prior periods for a non-cash-generating asset may no longer exist or may have decreased. If any such indication exists, the municipality estimates the recoverable service amount of that asset.

An impairment loss recognised in prior periods for a non-cash-generating asset is reversed if there has been a change in the estimates used to determine the asset's recoverable service amount since the last impairment loss was recognised. The carrying amount of the asset is increased to its recoverable service amount. The increase is a reversal of an impairment loss. The increased carrying amount of an asset attributable to a reversal of an impairment loss does not exceed the carrying amount that would have been determined (net of depreciation or amortisation) had no impairment loss been recognised for the asset in prior periods.

A reversal of an impairment loss for a non-cash-generating asset is recognised immediately in surplus or deficit.

After a reversal of an impairment loss is recognised, the depreciation (amortisation) charge for the non-cash-generating asset is adjusted in future periods to allocate the non-cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Redesignation

The redesignation of assets from a cash-generating asset to a non-cash-generating asset or from a non-cash-generating asset to a cash-generating asset only occur when there is clear evidence that such a redesignation is appropriate.

1.13 Employee benefits

Employee benefits are all forms of consideration given by the municipality in exchange for service rendered by employees.

A qualifying insurance policy is an insurance policy issued by an insurer that is not a related party (as defined in the Standard of GRAP on Related Party Disclosures) of the reporting municipality if the proceeds of the policy can be used only to pay or fund employee benefits under a defined benefit plan and are not available to the reporting municipality's own creditors (even in liquidation) and cannot be paid to the reporting municipality, unless either:

the proceeds represent surplus assets that are not needed for the policy to meet all the related employee benefit obligations; or

the proceeds are returned to the reporting municipality to reimburse it for employee benefits already paid.

Termination benefits are employee benefits payable as a result of either:

the municipality's decision to terminate an employee's employment before the normal retirement date; or an employee's decision to accept voluntary redundancy in exchange for those benefits.

Other long-term employee benefits are employee benefits (other than post-employment benefits and termination benefits) that are not due to be settled within twelve months after the end of the period in which the employees render the related service.

Vested employee benefits are employee benefits that are not conditional on future employment.

Composite social security programmes are established by legislation and operate as multi-employer plans to provide post-employment benefits as well as to provide benefits that are not consideration in exchange for service rendered by employees.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.13 Employee benefits (continued)

A constructive obligation is an obligation that derives from the municipality 's actions where by an established pattern of past practice, published policies or a sufficiently specific current statement, the municipality has indicated to other parties that it will accept certain responsibilities and as a result, the municipality has created a valid expectation on the part of those other parties that it will discharge those responsibilities.

Short-term employee benefits

Short-term employee benefits are employee benefits (other than termination benefits) that are due to be settled within twelve months after the end of the period in which the employees render the related service.

Short-term employee benefits include items such as:

wages, salaries and social security contributions;

short-term compensated absences (such as paid annual leave and paid sick leave) where the compensation for the absences is due to be settled within twelve months after the end of the reporting period in which the employees render the related employee service;

bonus, incentive and performance related payments payable within twelve months after the end of the reporting period in which the employees render the related service; and

non-monetary benefits (for example, medical care, and free or subsidised goods or services such as housing, cars and cellphones) for current employees.

When an employee has rendered service to the entity during a reporting period, the entity recognise the undiscounted amount of short-term employee benefits expected to be paid in exchange for that service:

as a liability (accrued expense), after deducting any amount already paid. If the amount already paid exceeds the undiscounted amount of the benefits, the municipality recognise that excess as an asset (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund; and as an expense, unless another Standard requires or permits the inclusion of the benefits in the cost of an asset.

The expected cost of compensated absences is recognised as an expense as the employees render services that increase their entitlement or, in the case of non-accumulating absences, when the absence occurs. The municipality measure the expected cost of accumulating compensated absences as the additional amount that the entity expects to pay as a result of the unused entitlement that has accumulated at the reporting date.

The entity recognise the expected cost of bonus, incentive and performance related payments when the municipality has a present legal or constructive obligation to make such payments as a result of past events and a reliable estimate of the obligation can be made. A present obligation exists when the entity has no realistic alternative but to make the payments.

Post-employment benefits

Post-employment benefits are employee benefits (other than termination benefits) which are payable after the completion of employment.

Post-employment benefit plans are formal or informal arrangements under which an entity provides post-employment benefits for one or more employees.

Multi-employer plans are defined contribution plans (other than state plans and composite social security programmes) or defined benefit plans (other than state plans) that pool the assets contributed by various entities that are not under common control and use those assets to provide benefits to employees of more than one entity, on the basis that contribution and benefit levels are determined without regard to the identity of the entity that employs the employees concerned.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.13 Employee benefits (continued)

Post-employment benefits: Defined contribution plans

Defined contribution plans are post-employment benefit plans under which the municipality pays fixed contributions into a separate municipality (a fund) and will have no legal or constructive obligation to pay further contributions if the fund does not hold sufficient assets to pay all employee benefits relating to employee service in the current and prior periods.

When an employee has rendered service to the municipality during a reporting period, the municipality recognise the contribution payable to a defined contribution plan in exchange for that service:

as a liability (accrued expense), after deducting any contribution already paid. If the contribution already paid exceeds the contribution due for service before the reporting date, the municipality recognise that excess as an asset (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund; and

as an expense, unless another Standard requires or permits the inclusion of the contribution in the cost of an asset.

Where contributions to a defined contribution plan do not fall due wholly within twelve months after the end of the reporting period in which the employees render the related service, they are discounted. The rate used to discount reflects the time value of money. The currency and term of the financial instrument selected to reflect the time value of money is consistent with the currency and estimated term of the obligation.

Actuarial assumptions

Actuarial assumptions are unbiased and mutually compatible.

Financial assumptions are based on market expectations, at the reporting date, for the period over which the obligations are to be settled.

The rate used to discount post-employment benefit obligations (both funded and unfunded) reflect the time value of money. The currency and term of the financial instrument selected to reflect the time value of money is consistent with the currency and estimated term of the post-employment benefit obligations.

Post-employment benefit obligations are measured on a basis that reflects:

estimated future salary increases;

the benefits set out in the terms of the plan (or resulting from any constructive obligation that goes beyond those terms) at the reporting date; and

estimated future changes in the level of any state benefits that affect the benefits payable under a defined benefit plan, if, and only if, either:

those changes were enacted before the reporting date; or

past history, or other reliable evidence, indicates that those state benefits will change in some predictable manner, for example, in line with future changes in general price levels or general salary levels.

Assumptions about medical costs take account of estimated future changes in the cost of medical services, resulting from both inflation and specific changes in medical costs.

1.14 Provisions and contingencies

Provisions are recognised when:

the municipality has a present obligation as a result of a past event;

it is probable that an outflow of resources embodying economic benefits or service potential will be required to settle the obligation; and

a reliable estimate can be made of the obligation.

The amount of a provision is the best estimate of the expenditure expected to be required to settle the present obligation at the reporting date.

Where the effect of time value of money is material, the amount of a provision is the present value of the expenditures expected to be required to settle the obligation.

The discount rate is a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the liability.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.14 Provisions and contingencies (continued)

Where some or all of the expenditure required to settle a provision is expected to be reimbursed by another party, the reimbursement is recognised when, and only when, it is virtually certain that reimbursement will be received if the municipality settles the obligation. The reimbursement is treated as a separate asset. The amount recognised for the reimbursement does not exceed the amount of the provision.

Provisions are reviewed at each reporting date and adjusted to reflect the current best estimate. Provisions are reversed if it is no longer probable that an outflow of resources embodying economic benefits or service potential will be required, to settle the obligation.

Where discounting is used, the carrying amount of a provision increases in each period to reflect the passage of time. This increase is recognised as an interest expense.

A provision is used only for expenditures for which the provision was originally recognised.

Provisions are not recognised for future operating deficits.

If an entity has a contract that is onerous, the present obligation (net of recoveries) under the contract is recognised and measured as a provision.

A constructive obligation to restructure arises only when an entity:

has a detailed formal plan for the restructuring, identifying at least:

- the activity/operating unit or part of a activity/operating unit concerned;
- the principal locations affected;
- the location, function, and approximate number of employees who will be compensated for services being terminated:
- the expenditures that will be undertaken; and
- when the plan will be implemented; and

has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

A restructuring provision includes only the direct expenditures arising from the restructuring, which are those that are both: necessarily entailed by the restructuring; and

not associated with the ongoing activities of the municipality

No obligation arises as a consequence of the sale or transfer of an operation until the municipality is committed to the sale or transfer, that is, there is a binding arrangement.

After their initial recognition contingent liabilities recognised in entity combinations that are recognised separately are subsequently measured at the higher of:

the amount that would be recognised as a provision; and

the amount initially recognised less cumulative amortisation.

Contingent assets and contingent liabilities are not recognised. Contingencies are disclosed in note 47.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.14 Provisions and contingencies (continued)

Decommissioning, restoration and similar liability

Changes in the measurement of an existing decommissioning, restoration and similar liability that result from changes in the estimated timing or amount of the outflow of resources embodying economic benefits or service potential required to settle the obligation, or a change in the discount rate, is accounted for as follows:

If the related asset is measured using the cost model:

changes in the liability is added to, or deducted from, the cost of the related asset in the current period. the amount deducted from the cost of the asset does not exceed its carrying amount. If a decrease in the liability exceeds the carrying amount of the asset, the excess is recognised immediately in surplus or deficit. if the adjustment results in an addition to the cost of an asset, the entity consider whether this is an indication that the new carrying amount of the asset may not be fully recoverable. If there is such an indication, the entity test the asset for impairment by estimating its recoverable amount or recoverable service amount, and account for any impairment loss, in accordance with the accounting policy on impairment of assets as described in accounting policy 1.11 and 1.12.

If the related asset is measured using the revaluation model:

changes in the liability alter the revaluation surplus or deficit previously recognised on that asset, so that:

- a decrease in the liability is credited directly to revaluation surplus in net assets, except that it is recognised in surplus or deficit to the extent that it reverses a revaluation deficit on the asset that was previously recognised in surplus or deficit; and
- an increase in the liability is recognised in surplus or deficit, except that it is debited directly to revaluation surplus in net assets to the extent of any credit balance existing in the revaluation surplus in respect of that asset; in the event that a decrease in the liability exceeds the carrying amount that would have been recognised had the asset been carried under the cost model, the excess is recognised immediately in surplus or deficit; a change in the liability is an indication that the asset may have to be revalued in order to ensure that the carrying amount does not differ materially from that which would be determined using fair value at the reporting date. Any such revaluation is taken into account in determining the amounts to be taken to surplus or deficit and net assets. If a revaluation is necessary, all assets of that class is revalued; and

the Standard of GRAP on Presentation of Financial Statements requires disclosure on the face of the statement of changes in net assets of each item of revenue or expense that is recognised directly in net assets. In complying with this requirement, the change in the revaluation surplus arising from a change in the liability is separately identified and disclosed as such.

The adjusted depreciable amount of the asset is depreciated over its useful life. Therefore, once the related asset has reached the end of its useful life, all subsequent changes in the liability is recognised in surplus or deficit as they occur. This applies under both the cost model and the revaluation model.

The periodic unwinding of the discount is recognised in surplus or deficit as a finance cost as it occurs.

1.15 Commitments

Items are classified as commitments when an entity has committed itself to future transactions that will normally result in the outflow of cash.

Disclosures are required in respect of unrecognised contractual commitments.

Commitments for which disclosure is necessary to achieve a fair presentation should be disclosed in a note to the financial statements, if both the following criteria are met:

Contracts should be non-cancellable or only cancellable at significant cost (for example, contracts for computer or building maintenance services); and

Contracts should relate to something other than the routine, steady, state business of the entity – therefore salary commitments relating to employment contracts or social security benefit commitments are excluded.

1.16 Revenue from exchange transactions

Revenue is the gross inflow of economic benefits or service potential during the reporting period when those inflows result in an increase in net assets, other than increases relating to contributions from owners.

An exchange transaction is one in which the municipality receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of goods, services or use of assets) to the other party in exchange.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.16 Revenue from exchange transactions (continued)

Service charges relating to refuse are based on the tariffs set per the tariff policy.

Measurement

Revenue is measured at the fair value of the consideration received or receivable, net of trade discounts and volume rebates.

Sale of goods

Revenue from the sale of goods is recognised when all the following conditions have been satisfied:

the municipality has transferred to the purchaser the significant risks and rewards of ownership of the goods; the municipality retains neither continuing managerial involvement to the degree usually associated with ownership nor effective control over the goods sold;

the amount of revenue can be measured reliably;

it is probable that the economic benefits or service potential associated with the transaction will flow to the municipality; and

the costs incurred or to be incurred in respect of the transaction can be measured reliably.

Rendering of services

When the outcome of a transaction involving the rendering of services can be estimated reliably, revenue associated with the transaction is recognised by reference to the stage of completion of the transaction at the reporting date. The outcome of a transaction can be estimated reliably when all the following conditions are satisfied:

the amount of revenue can be measured reliably;

it is probable that the economic benefits or service potential associated with the transaction will flow to the municipality;

the stage of completion of the transaction at the reporting date can be measured reliably; and the costs incurred for the transaction and the costs to complete the transaction can be measured reliably.

When services are performed by an indeterminate number of acts over a specified time frame, revenue is recognised on a straight line basis over the specified time frame unless there is evidence that some other method better represents the stage of completion. When a specific act is much more significant than any other acts, the recognition of revenue is postponed until the significant act is executed.

When the outcome of the transaction involving the rendering of services cannot be estimated reliably, revenue is recognised only to the extent of the expenses recognised that are recoverable.

Service revenue is recognised by reference to the stage of completion of the transaction at the reporting date. Stage of completion is determined by surveys of work performed.

1.17 Revenue from non-exchange transactions

Revenue comprises gross inflows of economic benefits or service potential received and receivable by an municipality, which represents an increase in net assets, other than increases relating to contributions from owners.

Conditions on transferred assets are stipulations that specify that the future economic benefits or service potential embodied in the asset is required to be consumed by the recipient as specified or future economic benefits or service potential must be returned to the transferor.

Control of an asset arise when the municipality can use or otherwise benefit from the asset in pursuit of its objectives and can exclude or otherwise regulate the access of others to that benefit.

Exchange transactions are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

Expenses paid through the tax system are amounts that are available to beneficiaries regardless of whether or not they pay taxes.

Fines are economic benefits or service potential received or receivable by entities, as determined by a court or other law enforcement body, as a consequence of the breach of laws or regulations.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.17 Revenue from non-exchange transactions (continued)

Non-exchange transactions are transactions that are not exchange transactions. In a non-exchange transaction, an municipality either receives value from another municipality without directly giving approximately equal value in exchange, or gives value to another municipality without directly receiving approximately equal value in exchange.

Restrictions on transferred assets are stipulations that limit or direct the purposes for which a transferred asset may be used, but do not specify that future economic benefits or service potential is required to be returned to the transferor if not deployed as specified.

Stipulations on transferred assets are terms in laws or regulation, or a binding arrangement, imposed upon the use of a transferred asset by entities external to the reporting municipality.

Tax expenditures are preferential provisions of the tax law that provide certain taxpayers with concessions that are not available to others.

The taxable event is the event that the government, legislature or other authority has determined will be subject to taxation.

Taxes are economic benefits or service potential compulsorily paid or payable to entities, in accordance with laws and or regulations, established to provide revenue to government. Taxes do not include fines or other penalties imposed for breaches of the law.

Transfers are inflows of future economic benefits or service potential from non-exchange transactions, other than taxes.

Recognition

An inflow of resources from a non-exchange transaction recognised as an asset is recognised as revenue, except to the extent that a liability is also recognised in respect of the same inflow.

As the municipality satisfies a present obligation recognised as a liability in respect of an inflow of resources from a non-exchange transaction recognised as an asset, it reduces the carrying amount of the liability recognised and recognises an amount of revenue equal to that reduction.

Measurement

Revenue from a non-exchange transaction is measured at the amount of the increase in net assets recognised by the municipality.

When, as a result of a non-exchange transaction, the municipality recognises an asset, it also recognises revenue equivalent to the amount of the asset measured at its fair value as at the date of acquisition, unless it is also required to recognise a liability. Where a liability is required to be recognised it will be measured as the best estimate of the amount required to settle the obligation at the reporting date, and the amount of the increase in net assets, if any, recognised as revenue. When a liability is subsequently reduced, because the taxable event occurs or a condition is satisfied, the amount of the reduction in the liability is recognised as revenue.

Taxes

The municipality recognises an asset in respect of taxes when the taxable event occurs and the asset recognition criteria are met

Resources arising from taxes satisfy the definition of an asset when the municipality controls the resources as a result of a past event (the taxable event) and expects to receive future economic benefits or service potential from those resources. Resources arising from taxes satisfy the criteria for recognition as an asset when it is probable that the inflow of resources will occur and their fair value can be reliably measured.

The municipality analyses the taxation laws to determine what the taxable events are for the various taxes levied.

The taxable event for property tax is the passing of the date on which the tax is levied, or the period for which the tax is levied, if the tax is levied on a periodic basis.

Taxation revenue is determined at a gross amount. It is not reduced for expenses paid through the tax system.

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.17 Revenue from non-exchange transactions (continued)

Transfers

The municipality recognises an asset in respect of transfers when the transferred resources meet the definition of an asset and satisfy the criteria for recognition as an asset.

Transferred assets are measured at their fair value as at the date of acquisition.

Debt forgiveness and assumption of liabilities

The municipality recognise revenue in respect of debt forgiveness when the former debt no longer meets the definition of a liability or satisfies the criteria for recognition as a liability, provided that the debt forgiveness does not satisfy the definition of a contribution from owners.

Revenue arising from debt forgiveness is measured at the carrying amount of debt forgiven.

Fines

Fines are recognised as revenue when the receivable meets the definition of an asset and satisfies the criteria for recognition as an asset.

Assets arising from fines are measured at the best estimate of the inflow of resources to the municipality.

Where the municipality collects fines in the capacity of an agent, the fine will not be revenue of the collecting entity.

Where settlement discount or reductions in the amount payable are offered, the municipality considers past history in assessing the likelihood of these discount or reductions being taken up by debtors.

Gifts and donations, including goods in-kind

Gifts and donations, including goods in kind, are recognised as assets and revenue when it is probable that the future economic benefits or service potential will flow to the municipality and the fair value of the assets can be measured reliably.

1.18 Investment income

Investment income is recognised on a time-proportion basis using the effective interest method.

1.19 Borrowing costs

Borrowing costs are interest and other expenses incurred by an entity in connection with the borrowing of funds.

Qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use of sale.

Borrowing costs are recognised as an expense in the period in which they are incurred.

1.20 Comparative figures

Where necessary, comparative figures have been reclassified to conform to changes in presentation in the current year.

1.21 Unauthorised expenditure

Unauthorised expenditure means:

overspending of the total amount appropriated in the municipality's approved budget overspending of the total amount appropriated for a vote in the approved budget. expenditure from a vote unrelated to the department or function area covered by vote. expenditure of money appropriated for a specific purpose otherwise than for that spefic purpose. spending of an allocation referred to in paragraph (b),(c) or(d) of the definition of allocation otherwise than in accordance with an allocation or

a grant by the municipality otherwise than in accordance with Municipal Finance Management Act

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.21 Unauthorised expenditure (continued)

All expenditure relating to unauthorised expenditure is recognised as an expense in the statement of financial performance in the year that the expenditure was incurred. The expenditure is classified in accordance with the nature of the expense, and where recovered, it is subsequently accounted for as revenue in the statement of financial performance.

1.22 Fruitless and wasteful expenditure

Fruitless expenditure means expenditure which was made in vain and would have been avoided had reasonable care been exercised.

All expenditure relating to fruitless and wasteful expenditure is recognised as an expense in the statement of financial performance in the year that the expenditure was incurred. The expenditure is classified in accordance with the nature of the expense, and where recovered, it is subsequently accounted for as revenue in the statement of financial performance.

1.23 Irregular expenditure

Irregular expenditure is expenditure that is contrary to the Municipal Finance Management Act (Act No.56 of 2003), the Municipal Systems Act (Act No.32 of 2000), and the Public Office Bearers Act (Act No. 20 of 1998) or is in contravention of the economic entity's supply chain management policy. Irregular expenditure excludes unauthorised expenditure. Irregular expenditure is accounted for as expenditure in the Statement of Financial Performance and where recovered, it is subsequently accounted for as revenue in the Statement of Financial Performance.

1.24 Budget information

Municipality are typically subject to budgetary limits in the form of appropriations or budget authorisations (or equivalent), which is given effect through authorising legislation, appropriation or similar.

General purpose financial reporting by municipality shall provide information on whether resources were obtained and used in accordance with the legally adopted budget.

The approved budget is prepared on a accrual basis and presented by economic classification linked to performance outcome objectives.

The approved budget covers the fiscal period from 01-Jul-14 to 30-Jun-15.

The annual financial statements and the budget are on the same basis of accounting therefore a comparison with the budgeted amounts for the reporting period have been included in the Statement of comparison of budget and actual amounts.

1.25 Related parties

A related party is a person or entity with the ability to control or jointly control the other party ,or exercise significant influence over the other party ,or vice versa , or any entity that is subject to common control or joint control.

Management are those persons responsible for planning, directing and controlling the activities of the municipality, including those charged with the governance of the municipality in accordance with legislation, in instances where they are required to perform such functions.

Close members of the family of a person are considered to be those family members who may be expected to influence, or be influenced by, that management in their dealings with the municipality.

Only transactions with related parties not at arm's length or not in the ordinary course of business are disclosed.

1.26 Events after reporting date

Events after reporting date are those events, both favourable and unfavourable, that occur between the reporting date and the date when the financial statements are authorised for issue. Two types of events can be identified:

those that provide evidence of conditions that existed at the reporting date (adjusting events after the reporting date); and

those that are indicative of conditions that arose after the reporting date (non-adjusting events after the reporting date).

Annual Financial Statements for the year ended June 30, 2015

Accounting Policies

1.26 Events after reporting date (continued)

The municipality will adjust the amount recognised in the financial statements to reflect adjusting events after the reporting date once the event occurred.

The municipality will disclose the nature of the event and an estimate of its financial effect or a statement that such estimate cannot be made in respect of all material non-adjusting events, where non-disclosure could influence the economic decisions of users taken on the basis of the financial statements.

1.27 VAT

Value Added Tax on revenue and expenditure transactions are recorded in the books of the municipality on accrual basis of accounting, however South African Revenue Services has registered and permitted the municipality to use the payment basis.

Notes to the Annual Financial Statements

2015	2014

8. Investment property (continued)

A register containing the information required by section 63 of the Municipal Finance Management Act is available for inspection at the registered office of the municipality.

Details of valuation

The municipality has land and buildings, including vacant land that is classified as investment property. In terms of the Local Government Municipal Properties Rates Act of 2004, the municipality is required to perform general valuation once every four (4) years. The investment property held in the books of the municipality is not actively traded as the mandate of the municipality also includes local economic development. As such properties may be earmarked for local economic development. Thus, their trade value will be based on the proposal that impacts positively on economic growth. Therefore fair value cannot be measured reliably at each reporting date.

The land and buildings within the Municipality are valued as a single amount in the Fixed asset registers and no separation has been made thus depreciation is charged on the total value of the property. This is as a result of the fact that land owned by the Municipality was acquired for no cost.

Amounts recognised in surplus and deficit for the year.

Rental revenue from investment property

2.228.065

2.034.862

There are no contractual commitments for the acquisition, construction, development or repair and maintenance of investment properties in the municipality.

Notes to the Annual Financial Statements

Current liabilities			364,186	436,581
			742,445	990,262

The average lease term is 6 years. The finance lease is in respect of the motor vehicles and other office equipment . The nominal or effective interest rates varies . The municipality will take ownership when the lease term expires . The lease agreements do not provide for contingency rental payments.

The municipality's obligations under the finance leases are secured by the lessor's charge over the leased assets.

	22,971,140	20,183,412

Defined benefit obligation

The Municipality has a defined benefit obligation in terms of the Long Service Awards. The defined benefit obligation is valued every year by independent qualified actuaries. The most recent valuations have been carried out by ZAQ Consultants and Actuaries ("ZAQ"), a Fellow of the Actuarial Society of South Africa, using the Projected Unit Credit method.

The discount rate that reflects the time value of money is best approximated by reference to market yield at the reporting dates on government bonds.

Long service awards to eligible employees are paid for services rendered by employees of 5 years and longer in five year intervals. The service awards are paid as per the municipality's policy which complies with the minimum thresholds per the collective agreement of 21 February 2011, signed by the Bargaining Council. The basis on which this was calculated is as follows:

- After 5 Continuous Years of Service 2% of Basic Annual Salary and 5 days accumulative leave
- After 10 Continuous Years of Service 3% of Basic Annual Salary and 10 days accumulative leave
- After 15 Continuous Years of Service 4% of Basic Annual Salary and 15 days accumulative leave
- After 20 Continuous Years of Service 5% of Basic Annual Salary and 15 days accumulative leave
- After 25 Continuous Years of Service 6% of Basic Annual Salary and 15 days accumulative leave
- After 30 Continuous Years of Service 6% of Basic Annual Salary and 15 days accumulative leave
- After 35 Continuous Years of Service 6% of Basic Annual Salary and 15 days accumulative leave
- After 40 Continuous Years of Service 6% of Basic Annual Salary and 15 days accumulative leave
- After 45 Continuous Years of Service 6% of Basic Annual Salary and 15 days accumulative leave

The amounts recognised in the statement of financial position are as follows:

	972,000	3,607,400
Actuarial (gains) / losses	(669,000)	2,620,400
Interest cost	575,000	285,000
Current service cost	1,066,000	702,000
The amount recognised in the Statement of Financial Performance		
	7,281,000	7,043,000

Changes in the present value of the defined benefit obligation are as follows:		
Long service awards Carrying value	7,281,000	7,043,000

Notes to the Annual Financial Statements

2015	2014
R	R

14. Employee benefit obligations (continued)

The principal assumptions for the purpose of valuations are as follows:

Assumptions used at the reporting date:

Discount rates used	8.50 %	7.96 %
CPI (Consumer price index)	6.23 %	6.33 %
Expected increase in salaries	6.79 %	7.33 %

The expected retirement age is 65 years.

The SA85-90 mortality table was used.

The basis on which the discount rate has been determined is as follows:

The discount rate determined by using the Bond Exchange Zero Coupon Yield Curve as at 30 June 2015 is 8.50% per annum

Withdrawal rates

Age	Males	Females
20 - 24	16 %	24 %
25 - 29	12 %	18 %
30 - 34	10 %	15 %
35 - 39	8 %	10 %
40 - 44	6 %	6 %
45 - 49	4 %	4 %
50 - 54	2 %	2 %
55 - 59	1 %	1 %
60+	- %	- %

Other assumptions

The assumed increase in salaries has a significant effect on the amounts recognised in surplus or deficit. A one percentage point change in the assumed increase in salaries would have the following effects:

		nt increase p	ercentage oint ecrease
Effect on the aggregate of the service cost and interest cost Effect on defined benefit obligation		2,072,000 7,801,000	1,774,000 6,814,000
Amounts for the current and previous years are as follows:			
	2015 R	2014 R	2013 R
Defined benefit obligation	7,281,000	7,043,00	0 3,708,000

Other employee benefit obligations

Bonus accrual

Bonuses are paid out to all employees, excluding some senior managers, in September each year and are based on a 13th monthly basic salary.

Leave pay accrual

2015

The leave pay accrual is calculated using the leave days owing to employees at the end of the financial year. The number of days that can be carried over is limited to 48 days in accordance with the Municipality's leave policy.

Legal proceedings	_	1,800,000	1,800,000
	21,527,807	3,191,007	24,718,814

Environmental rehabilitation provision

The Municipality operates a landfill site in Butterworth. This site is approximately 5224 square metres. The current legislation indicates that the landfill site is and has been operating illegally as the municipality has no licence to operate the site.

Additionally it is required that this landfill site should be closed in terms of minimum requirements. The legislation however does not specify the time frame within which this must be undertaken.

During the financial year consultants were appointed to calculate the cost of rehabilitating and closing this site. The amount was calculated and has been included above as the provision for the rehabilitation and closure of the site.

Additionally during the financial year the site was not used illegally. The municipality has applied for a licence and is awaiting approval and issue thereof in order to commence with the process of rehabilitating and closing the site.

Legal proceedings provisions

During the year the municipality lost a legal proceeding with a previous employee whereby they were ordered to pay out the above-mentioned amount. The municipality is contesting this ruling and the amount is therefore included under provisions.

Valuations on land and buildings are performed every 4 years. The last general valuation came into effect on 1 July 2014. Interim valuations are conducted at least once on an annual basis to take into account changes in individual property values due to alterations and subdivisions. Tariffs applied are as follows:

Residential

A general rate of R0.01178 - (2014: R 0.01532) is applied to residential property valuations to determine assessment rates. Rebates are granted to all residential property owners.

Business and Commercial

A general rate of R0.01414 - (2014: R0.018384) is applied to business and commercial property valuations to determine assessment rates.

Vacant

A general rate of R0.01414 - (2014: R0.018384) is applied to vacant and industrial property valuations to determine assessment rates.

Public Services

A general rate of R0.00295 - (2014: R0.00383) is applied to vacant and industrial property valuations to determine assessment rates.

Small Holdings and Farms

A general rate of R0.00295 - (2014: R0.00383) is applied to vacant and industrial property valuations to determine assessment rates.

Industrial

A general rate of R0.01414 - (2014: R0.018384) is applied to industrial property valuations to determine assessment rates.

Rebates

Rebates are granted to property owners in accordance with a variety of social and economic factors as described in the Municipality's Property Rates Policy.

Equitable Share

In terms of the Constitution, this grant is used to subsidise the provision of basic services to indigent community members as well as the operations of the municipality.

All registered indigents receive the following subsidies:

- 1. For paraffin beneficiaries, every ward has 100 beneficiaries at 20 litre person bi-monthly
- 2. For all electricity beneficiaries, 50 KW per month
- 3. Rebates of R20,000 are granted to residential property owners.

Operating lease payments represent rentals payable by the municipality for certain of its office properties. Leases are negotiated for an average term not exceeding three years. No contingent rent is payable. There are no escalation clauses.

The municipality does not have an option to purchase the leased asset at the expiry of the lease period.

37. Comparative figures

Where necessary, comparative figures have been reclassified to conform to changes in presentation in the current year.

When the presentation or classification of items in the financial statements is amended, prior period comparative amounts are also reclassified and restated, unless such comparative reclassification and / or restatement is not required by a Standard of GRAP. The nature and reason for such reclassifications and restatements are also disclosed.

Where material accounting errors, which relate to prior periods, have been identified in the current year, the correction is made retrospectively as far as is practicable and the prior year comparatives are restated accordingly.

Where there has been a change in accounting policy in the current year, the adjustment is made retrospectively as far as is practicable, and the prior year comparatives are restated accordingly.

Annual Financial Statements for the year ended June 30, 2015

Notes to the Annual Financial Statements

2015	2014
R	R

37. Comparative figures (continued)

The presentation and classification of items in the current year is consistent with prior years, except as otherwise indicated.

The nature and reasons for the reclassifications and restatements are disclosed in note 36 to the financial statements.

38. Risk management

Financial risk management

The municipality's activities expose it to a variety of financial risks: market risk (including currency risk, fair value interest rate risk, cash flow interest rate risk and price risk), credit risk and liquidity risk.

The municipality's overall risk management program focuses on the unpredictability of financial markets and seeks to minimise potential adverse effects on the municipality's financial performance. The municipality uses derivative financial instruments to hedge certain risk exposures. Risk management is carried out by a central treasury department (entity treasury) under policies approved by the . Municipality treasury identifies, evaluates and hedges financial risks in close co-operation with the municipality's operating units. The provides written principles for overall risk management, as well as written policies covering specific areas, such as foreign exchange risk, interest rate risk, credit risk, use of derivative financial instruments and non-derivative financial instruments, and investment of excess liquidity.

Liquidity risk

The municipality's risk to liquidity is a result of the funds available to cover future commitments. The municipality manages liquidity risk through an ongoing review of future commitments and credit facilities.

Credit risk

Credit risk consists mainly of cash deposits, cash equivalents, derivative financial instruments and trade debtors. The municipality only deposits cash with major banks with high quality credit standing and limits exposure to any one counter-party.

Trade receivables comprise a widespread customer base. Management evaluated credit risk relating to customers on an ongoing basis. If customers are independently rated, these ratings are used. Otherwise, if there is no independent rating, risk control assesses the credit quality of the customer, taking into account its financial position, past experience and other factors. Individual risk limits are set based on internal or external ratings in accordance with limits set by the board. The utilisation of credit limits is regularly monitored. Sales to retail customers are settled in cash or using major credit cards. Credit guarantee insurance is purchased when deemed appropriate.

Financial assets exposed to credit risk at year end were as follows:

Financial instrument	2015	2014
Receivables from exchange transactions	12,470,227	8,319,512
Receivables from non-exchange transactions	15,339,245	5,033,645
Bank, cash and cash equivalents	61,123,539	90,601,925

39. Going concern

The annual financial statements have been prepared on the basis of accounting policies applicable to a going concern. This basis presumes that funds will be available to finance future operations and that the realisation of assets and settlement of liabilities, contingent obligations and commitments will occur in the ordinary course of business.

The Accounting Officer is of the opinion that the municipality will continue to as a going concern for the foreseeable future.

40. Events after the reporting date

The write off of long outstanding debtors balances of R63 308 496 was approved by council on 28 August 2015.

_		
	2015	2014
	R	R

44. Additional disclosure in terms of Municipal Finance Management Act (continued)

Councillors' arrear consumer accounts

The following Councillors had arrear accounts outstanding for more than 90 days at June 30, 2015:

June 30, 2015	Outstanding less than 90 days R	Outstanding more than 90 days R	Total R
Councillor Bikitsha	-	51	51
Councillor Mathanga	-	8,362	8,362
Councillor Mgandela	-	6,411	6,411
Councillor Mngonyama	-	2,207	2,207
Councillor Ntshebe	382	2,809	3,191
	382	19,840	20,222

45. Deviation from supply chain management regulations

Paragraph 12(1)(d)(i) of Government gazette No. 27636 issued on 30 May 2005 states that a supply chain management policy must provide for the procurement of goods and services by way of a competitive bidding process.

Paragraph 36 of the same gazette states that the accounting officer may dispense with the official procurement process in certain circumstances, provided that he records the reasons for any deviations and reports them to the next meeting of the Council and includes a note to the annual financial statements.

- 1. Services for newspaper delivery to the municipality amounting to R 12 403. The service provider is the only one in Eastern Cape. The reasons for these deviations were documented and reported to the Council who considered them and subsequently approved the deviation from the normal supply chain management regulations.
- 2. Repairs to the Tractor amounting to R43 471 . This is the only service provider in the area who offer specialised repairs to the tractors . The reasons for these deviations were documented and reported to the Council who considered them and subsequently approved the deviation from the normal supply chain management regulations.
- 3. Payment amounting to R199 500 for the tent hire for prayer day . The local service providers were unable to supply the tent . The reasons for these deviations were documented and reported to the Council who considered them and subsequently approved the deviation from the normal supply chain management regulations.
- 4. Payment amounting to R39 894 for security services. Not all service provider responded to the quote and was impractical to follow SCM processes. The reasons for these deviations were documented and reported to the Council who considered them and subsequently approved the deviation from the normal supply chain management regulations.
- 5. Payment amounting to R125 942 for procurement of school uniform. This was regarded as urgent and was impractical to follow SCM processes. The reasons for these deviations were documented and reported to the Council who considered them and subsequently approved the deviation from the normal supply chain management regulations.
- 6 Various repairs and maintenance of motor vehicles amounting to R1 407 000 . These repairs were regarded as urgent for service delivery purposes and was impractical to follow SCM processes. The reasons for these deviations were documented and reported to the Council who considered them and subsequently approved the deviation from the normal supply chain management regulations.

Annual Financial Statements for the year ended June 30, 2015

Notes to the Annual Financial Statements

2015	2014
2010	2011
R	R
1.	1.

46. Budget differences

Material differences between budget and actual amounts

Explanations have been provided for the excess of actual expenditure over the final budget of 10%.

46.1. Service charges

Management planned to implement a revenue enhancement strategy during the financial year. The objective of this programme is to increase the collection rate and expand the revenue base of the municipality however there were challenges in implementing the strategy. These will be addressed in the 2015/2016 financial year.

46.2 Interest Received from Debtors

Management planned to implement a revenue enhancement strategy during the financial year. The objective of this programme is to increase the collection rate and expand the revenue base of the municipality however there were challenges in implementing the strategy. These will be addressed in the 2015/2016 financial year.

46.3 Income from Agency Services

The municipality anticipated that there will be many vehicles to be registered during the financial year in line with the incremental budget approach which is appropriate for budgeting for such revenue items.

46.4 Licences and permits

The variance is caused by the increase in the number of people that came to book for Learners Licences. Throughout the financial year the municipality has been conducting traffic awareness campaigns that have assisted in terms of making communities aware of these services rendered by the municipality.

46.5 Other income

The variance is caused by a refund that was received by the municipality from Cape Joint Pension fund and the Credit balances that were realized during the financial year.

46.6. Interest received - Investments

Management managed to secure their investments for longer periods than hoped for in the investment accounts and therefore obtained a better return on investment in the current year.

46.7 Government grants and subsidies

The municipality over-budgeted for transfers and grants from the national fiscus.

46.8 Depreciation and amortisation

In the current year the municipality revalued its infrastructure assets. This resulted in a net increase in the fair value of the assets thereby affecting the depreciation charge.

46.9 Debt Impairment

In the current year council took a resolution to write off a significant portion of receivables which were deemed to be uncollectable as per the policy of council.

46.10 Finance costs

The difference is caused by the fact that there were finance leases that the municipality finished paying during the year. The municipality also intended to purchase municipal fleet on a finance lease but ended up buying this fleet in cash; hence we did not incur the additional finance charges that were budgeted.

Annual Financial Statements for the year ended June 30, 2015

Notes to the Annual Financial Statements

2015	2014
R	R

46. Budget differences (continued)

46.11 Collection costs

In the current year management under budgeted for collection costs. This was based on a view that through the implementation of the revenue enhancement strategy debt collections would be done in-house.

46.12 Repairs and maintenance

In the current year management under budgeted for repairs and maintenance as the municipality channeled more funds towards the purchase of new plant and vehicles to enhance service delivery.

46.13 Loss on disposal of assets and liabilities

The municipality anticipated to have gain when disposing the assets.

46.14 Fair value adjustments

The municipality changed the accounting policy later in the financial year and thus this fair value adjustment was not budgeted for

46.15 Actuarial gains / losses

The municipality does not budget for this transaction as this is a calculation that is outside our influence. The fair value adjustments are due to the market conditions and are determined by the Actuary at year end and thus the municipality has accounted for these in line GRAP 25

46.16 Inventories

Management did not budget for inventory as this balance is normally not material due to the nature of the operations of the municipality.

46.17 Receivables from non-exchange transactions

In the current year provision for bad debtors was under budgeted.

46.18 VAT Receivable

Management did not budget for the receivable due to the assessment of the days in debtors for SARS. It was therefore expected that all money receivable to the municipality would be paid prior the end of the financial year

46.19 Receivables from exchange transactions

In the current year provision for bad debtors was under budgeted.

46.20 Cash and cash equivalents

Due to under spending in the previous year this balance was over budgeted. In the current year management implemented programmes that ensured that service delivery projects are fast-tracked through investing in new plant and equipment and other basic infrastructure projects.

46.21 Investment property

This is budgeted for under the Property, Plant and Equipment

46.22 Property, Plant and Equipment

In the current year the municipality revalued its infrastructure assets. This resulted in an increase in the fair value of the assets. At the time of compiling the budget it was impractical to determine the direction of the revaluation.

Annual Financial Statements for the year ended June 30, 2015

Notes to the Annual Financial Statements

2015	2014
R	R

46. Budget differences (continued)

46.23 Intangible Assets

This is budgeted for under the Property, Plant and Equipment

46.24 Finance lease obligation - current liabilities

Management had planned funding for a finance lease of motor vehicles but owing to the costs involved, determined that the investment was not worth pursuing.

46.25 Payables from exchange transactions

When reporting during the 2013/2014 financial year the municipality did not accrue for the retention liability. This was corrected during the 2014/2015 financial year however it was not budgeted for since this was a yearend journal.

46.26 Payables from non-exchange transactions

This municipality received payments in advance from its rates and services consumers. Due to the nature of this balance the municipality does not budget for it since it is an unlikely occurrence that consumers would overpay for services given the collection rates the municipality has experienced over the years.

46.27 Employee benefit obligation - current liabilities

This is budgeted for under provisions. In terms of the MFMA: Municipal Budget and Reporting Regulations Gazette No. 32141 budget tables issued the National Treasury there is no provision for Employee Benefit Obligation hence it is common practice to budget for this liability under provisions.

46.28 Unspent conditional grants

The municipality planned to spend all the conditional grants as per the capital and operating budget of the municipality

46.29 Finance lease obligation – non-current liabilities

Management had planned funding for a finance lease of motor vehicles but owing to the costs involved, determined that the investment was not worth pursuing.

46.30 Employee benefit obligation - non-current liabilities

This is budgeted for under provisions. In terms of the MFMA: Municipal Budget and Reporting Regulations Gazette No. 32141 budget tables issued the National Treasury there is no provision for Employee Benefit Obligation hence it is common practice to budget for this liability under provisions.

46.31 Provisions - non-current liabilities

On the budget tables that are issued by the National Treasury in terms of the MFMA: Municipal Budget and Reporting Regulations, Gazette No: 32141 we have budgeted for the following: Leave provisions, Provision for long service bonus and the accrual for the 13th cheque bonus which is paid in December. When all these are grouped together they result in a variance of 8.9% which is not material.

46.32 Revaluation reserve

In the current year the municipality revalued its infrastructure assets. This resulted in an increase in the fair value of the assets. At the time of compiling the budget it was impractical to determine the direction of the revaluation.

46.33 Accumulated surplus

Balance affected by prior period corrections referred to in note 36

Annual Financial Statements for the year ended June 30, 2015

Notes to the Annual Financial Statements

2015	2014
R	R

46. Budget differences (continued)

46.34 Ratepayers and other

Management planned to implement a revenue enhancement strategy during the financial year. The objective of this programme is to increase the collection rate and expand the revenue base of the municipality however there were challenges in implementing the strategy. These will be addressed in the 2015/2016 financial year.

46.35 Sale of goods and services

On the budget tables that are issued by the National Treasury in terms of the MFMA: Municipal Budget and Reporting Regulations, Gazette No. 32141 there is no provision for this line item therefore it is budgeted under "Ratepayers and other".

46.36 Government grants and subsidies

The municipality over-budgeted for transfers and grants from the national fiscus.

46.37 Interest income

Management planned to implement a revenue enhancement strategy during the financial year. The objective of this programme is to increase the collection rate and expand the revenue base of the municipality however there were challenges in implementing the strategy. These will be addressed in the 2015/2016 financial year. Management also managed to secure their investments for longer periods than hoped for in the investment accounts and therefore obtained a better return on investment in the current year

46.38 Finance costs

The difference is caused by the fact that there were finance leases that the municipality finished paying during the year. The municipality also intended to purchase municipal fleet on a finance lease but ended up buying this fleet in cash; hence we did not incur the additional finance charges that were budgeted.

47. Contingencies

The following are the potential liabilities that may arise based on current court action against the municipality:

Description	2015	2014
Opening balance		
Case 1087/08 Langulabantu Construction vs Municipality-File 14/16/68	292,919.60	292,919.60

Notes to the Annual Financial Statements

48. Changes in accounting policy

During the year, the municipality changed its accounting policy in respect of the measurement of infrastructure, community assets (including land) and operational buildings (including land) from the cost model to the revaluation model. The municipality is of the opinion that the new subsequent measurement for these asset classes will result in a more fair presentation of the financial position and operating results.

The accounting policy has been accounted for retrospectively and the comparative amounts have been restated. The revaluation was performed as at 01 July 2013.

	Land	WIP	Community	Infrastructure	TOTAL
Statement of Financial Position					
Restated carrying value at 01 July 2013	21,925,964	10,197,342	70,283,063	802,905,058	905,311,427
Cost	21,925,964	10,197,342	113,450,562	1,340,022,901	1,485,596,769
Accumulated depreciation	-	-	(43,167,499)	(537,117,843)	(580,285,342)
Less: Previously stated Carrying value at 01 July 2013	22,975,976	-	29,305,589	407,885,682	460,167,247
Cost	22,975,976	-	83,280,657	653,819,775	760,076,408
Accumulated depreciation	-	-	(53,975,068)	(245,934,093)	(299,909,161)
Increase/(Decrease) in Revaluation reserve at 01 July 2013 Infrastructure costs above include landfill cost of R 21 527 8	(1,050,012) 307	10,197,342	40,977,474	395,019,376	445,144,180
