APPROVAL OF ANNUAL FINANCIAL STATEMENTS

I am responsible for the preparation of these financial statements, which are set out on pages 4 to 51, in terms of Section 126(1) of the Municipal Finance Management Act and which I have signed on behalf of the Municipality.

I certify that the salaries, allowances and benefits of Councillors, loans made to Councillors, if any, and payments made to Councillors for loss of office, if any, as disclosed in note 20 of these annual financial statements

are within the upper limits of the framework envisaged in Section 219 of the Constitution, read with the Remuneration of Public Officer Bearers Act and the Minister of Provincial and Local Government's determination in accordance with this Act.

Dr E.M.S Ntombela Municipal Manager

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

1. Presentation of Annual Financial Statements

The annual financial statements have been prepared in accordance with the Standards of Generally Recognised Accounting Practice (GRAP), issued by the Accounting Standards Board in accordance with Section 122(3) of the Municipal Finance Management Act (Act 56 of 2003).

These annual financial statements have been prepared on an accrual basis of accounting and are in accordance with historical cost convention as the basis of measurement, unless specified otherwise. They are presented in South African Rand. All figures have been rounded to the nearest Rand.

A summary of the significant accounting policies are disclosed below.

These accounting policies are consistent with the previous period, except for the changes set out in note. Changes in accounting policy.

2. New standards and interpretations

2.1. Standards and interpretations effective and adopted in the current year

In the current year, the municipality has adopted the following standards and interpretations that are effective for the current *financial year and that are relevant to its operations:*

GRAP 25: Employee Benefits

The objective of GRAP 25 is to prescribe the accounting and disclosure for employee benefits. The standard requires the municipality to recognise:

- A liability when an employee has provided service in exchange for employee benefits to be paid in the future; and
- an expense when the municipality consumes the economic benefits or service potential arising from service provided by an employee in exchange for employee benefits.
- The standard states the recognition, measurement and disclosure requirements of:
- short-term employee benefits;
 - all short-term employee benefits;
 - -short-term compensated absences;
 - bonus, incentive and performance related payments;
- post-employment benefits: Defined contribution plans;
- other long-term employee benefits; and termination benefits.

The major difference between this standard (GRAP 25) and IAS 19(R) is with regards to the treatment of actuarial gains and losses and past service costs. This standard requires the municipality to recognise all actuarial gains and losses and past service costs immediately in the statement of financial performance once occurred.

All amendments to be applied retrospectively.

The effective date of the standard is for years beginning on or after 01 April 2013.

The municipality has adopted the standard for the first time in the 2014 annual financial statements.

The impact of the standard is not material.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

GRAP 1 (as revised 2012): Presentation of Financial Statements

Minor amendments were made to the statement of financial performance as well as the statement of changes in net assets.

All amendments to be applied retrospectively.

The effective date of the amendment is for years beginning on or after 01 April 2013

The municipality has adopted the amendment for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

GRAP 3 (as revised 2012): Accounting Policies, Change in Accounting Estimates and Errors

Amendments were made to changes in accounting policies. A change to the cost model when a reliable measure of fair value is no longer available (or vice versa) for an asset that a standard of GRAP would otherwise require or permit to be measured at fair value is no longer considered to be a change in an accounting policy in terms of the Standard of GRAP on Accounting Policies, Changes in Accounting Estimates and Errors (as revised in 2010).

The effective date of the amendment is for years beginning on or after 01 April 2013

The municipality has adopted the amendment for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

GRAP 7 (as revised 2012): Investments in Associates

Amendments were made to definitions and a requirement to include transaction costs on initial recognition of an investment in an associate under the equity method has been included.

All amendments to be applied prospectively.

The effective date of the amendment is for years beginning on or after 01 April 2013. The municipality has adopted the amendment for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

GRAP 9 (as revised 2012): Revenue from Exchange Transactions

Amendments were made to the scope and definitions.

All amendments to be applied retrospectively.

The effective date of the amendment is for years beginning on or after 01 April 2013.

The municipality has adopted the amendment for the first time in the 2014 annual financial

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

statements.

The impact of the amendment is not material.

GRAP 13 (as revised 2012): Leases

Amendments were made to disclosures.

All amendments to be applied retrospectively.

The effective date of the amendment is for years beginning on or after 01 April 2013.

The municipality has adopted the amendment for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

GRAP 16 (as revised 2012): Investment Property

Amendments were made to definitions, measurement at recognition, disposals and disclosure. Changes were made to ensure the consistent application of the principle where assets are acquired in exchange for non-monetary assets when the exchange transaction lacks commercial substance. Furthermore the assessment of significant use of an investment property has been clarified.

All amendments to be applied prospectively.

The effective date of the amendment is for years beginning on or after 01 April 2013.

The municipality has adopted the amendment for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

GRAP 17 (as revised 2012): Property, Plant and Equipment

Amendments were made to measurement at recognition, disposals and disclosure. Changes were made to ensure the consistent application of the principle where assets are acquired in exchange for non-monetary assets when the exchange transaction lacks commercial substance. Furthermore the requirement to disclose property, plant and equipment that were temporarily idle has been clarified.

All amendments to be applied prospectively.

The effective date of the amendment is for years beginning on or after 01 April 2013.

The municipality has adopted the amendment for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

IGRAP 16: Intangible Assets - Website Costs

The interpretation deals with the treatment of the municipality's own website. It concludes that the municipality's own website that arises from development and is for internal or external access is an

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

internally generated intangible asset that is subject to the requirements of the Standard of GRAP on Intangible Assets.

A website arising from development will be recognised as an intangible asset if, and only if, in addition to complying with the general requirements described in the Standard of GRAP on Intangible Assets for recognition and initial measurement, the municipality can satisfy the requirements in paragraph .54, which in particular requires the municipality to be able to demonstrate how its website will generate probable future economic benefits or service potential.

If the municipality is not able to demonstrate how a website developed solely and primarily for providing information about its own products and services will generate probable future economic benefits or service potential, all expenditure on developing such a website will be recognised as an expense when incurred.

A website that is recognised as an intangible asset under this interpretation will be measured after initial recognition by applying the requirements in the Standard of GRAP on Intangible Assets.

Interpretation to be applied retrospectively.

The effective date of the interpretation is for years beginning on or after 01 April 2013.

The municipality has adopted the interpretation for the first time in the 2014 annual financial statements.

It is unlikely that the interpretation will have a material impact on the municipality's annual financial statements.

2.2. Standards and interpretations issued, but not yet effective

The municipality has not applied the following standards and interpretations, which have been published and are mandatory for the municipality's accounting periods beginning on or after 01 July 2014 or later periods:

GRAP 105: Transfers of Functions Between Entities Under Common Control

The objective of this standard is to establish accounting principles for the acquirer and transferor in a transfer of functions between entities under common control.

A transfer of functions between entities under common control is a reorganisation and / or reallocation of functions between entities that are ultimately controlled by the same entity before and after a transfer of functions.

In the event of a transfer of functions between entities under common control, the assets and liabilities should be recognised (by the acquirer) at their carrying amounts and should be derecognised (by the transferor) at their carrying amounts.

The difference between the amount of consideration paid or received, if any, and the carrying amounts of assets and liabilities should be recognised in accumulated surplus / (deficit).

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

The standard has been approved by the Accounting Standards Board but its effective date has not yet been determined by the Minister of Finance.

The municipality expects to adopt the standard for the first time once it become effective. It is unlikely that the amendment will have a material impact on the municipality's annual financial statements.

GRAP 106: Transfers of Functions Between Entities not Under Common Control

The objective of this standard is to establish accounting principles for the acquirer in a transfer of functions between entities not under common control.

A transfer of functions between entities not under common control is a reorganisation and / or reallocation of functions

between entities that are not ultimately controlled by the same entity before and after a transfer of functions.

In the event of a transfer of functions between entities not under common control, the assets and liabilities should be recognised (by the acquirer) at their acquisition date fair values.

The difference between the amount of consideration paid, if any, and the carrying amounts of assets acquired and liabilities assumed should be recognised in accumulated surplus / (deficit).

For a transfer of functions between entities not under common control there are some specific recognition and measurement principles and exceptions to the recognition and measurement principles.

The standard has been approved by the Accounting Standards Board but its effective date has not yet been determined by the Minister of Finance.

The municipality expects to adopt the standard for the first time once it becomes effective.

It is unlikely that the amendment will have a material impact on the municipality's annual financial statements.

GRAP 107: Mergers

The objective of this standard is to establish accounting principles for the combined entity and combining entities in a merger.

A merger is where a new combined entity is started, acquirer can be identified and the combining entities do not have any control over the combined entity.

In the event of a merger, the assets and liabilities should be recognised (by the combined entity) at their carrying amounts and should be derecognised (by the combining entities) at their carrying amounts.

The difference between the carrying amounts of assets and liabilities should be recognised in accumulated surplus /(deficit).

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

The standard has been approved by the Accounting Standards Board but its effective date has not yet been determined by the Minister of Finance.

The municipality expects to adopt the standard for the first time once it becomes effective.

It is unlikely that the amendment will have a material impact on the municipality's annual financial statements.

GRAP 5 (revised 2013): Borrowing Costs

Benchmark treatment is to recognise borrowing costs as an expense.

Allowed alternative is to capitalise borrowing costs if it is attributable to the acquisition, construction or production of a qualifying asset. All other instances, expense borrowing costs.

All amendments to be applied prospectively.

The effective date of the amendment is for years beginning on or after 01 April 2014.

The municipality has early adopted this standard for the 2013/14 financial period.

It is unlikely that the amendment will have a material impact on the municipality's annual financial statements.

2.3. Going concern assumption

These annual financial statements have been prepared based on the expectation that the municipality will continue to operate as a going concern for at least the next 12 months.

2.4. Post retirement benefits

The present value of the post retirement obligation depends on a number of factors that are determined on an actuarial basis using a number of assumptions. The assumptions used in determining the net cost (income) include the discount rate. Any changes in these assumptions will impact on the carrying amount of post retirement obligations.

The municipality determines the appropriate discount rate at the end of each year. This is the interest rate that should be used to determine the present value of estimated future cash outflows expected to be required to settle the pension obligations. The most appropriate discount rate that reflects the time value of money is with reference to market yields at the reporting date on government bonds. Where there is no deep market in government bonds with a sufficiently long maturity to match the estimated maturity of all the benefit payments, the municipality uses current market rates of the appropriate term to discount shorter term payments, and estimates the discount rate for longer maturities by extrapolating current market rates along the yield curve.

Other key assumptions for pension obligations are based on current market conditions. Additional information is disclosed in Note.

Effective interest rate

The municipality used the government bond rate to discount future cash flows.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Allowance for impairment

For receivables an impairment loss is recognised in surplus and deficit when there is objective evidence that it is impaired. The impairment is measured as the difference between the receivables carrying amount and the present value of estimated future cash flows discounted at the effective interest rate, computed at initial recognition.

2.5. Investment property

Investment property is property (land or a building - or part of a building - or both) held to earn rentals or for capital appreciation or both, rather than for: use in the production or supply of goods or services; or administrative purposes; or sale in the ordinary course of operations.

Investment property is recognised as an asset when, it is probable that the future economic benefits or service potential that are associated with the investment property will flow to the municipality, and the cost or fair value can be measured reliably.

Investment property is initially recognised at cost. Transaction costs are included in the initial measurement.

Where investment property is acquired at no cost, or for a nominal cost, its cost is its fair value as at the date of acquisition.

Costs include costs incurred initially and costs incurred subsequently to add to, or to replace a part of, or service a property. If a replacement part is recognised in the carrying amount of the investment property, the carrying amount of the replaced part is derecognised.

Cost model

Subsequent to initial measurement investment property is carried at cost less accumulated depreciation and any accumulated impairment losses.

Depreciation is provided to write down the cost, less estimated residual value, on a straight line basis over the useful life of the property, which is as follows:

Item Useful life Property - buildings x years

Investment property is derecognised on disposal or when the investment property is permanently withdrawn from use and no future economic benefits or service potential are expected from its disposal.

The gain or loss arising from the derecognition of investment property is determined as the difference between the net disposal proceeds and the carrying amount of the asset. Such difference is recognised in surplus or deficit when the asset is derecognised.

Compensation from third parties for investment property that was impaired, lost or given up is recognised in surplus or deficit when the compensation becomes receivable.

2.6. Property, plant and equipment

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Property, plant and equipment are tangible non-current assets (including infrastructure assets) that are held for use in the production or supply of goods or services, rental to others, or for administrative purposes, and are expected to be used during more than one period.

The cost of an item of property, plant and equipment is recognised as an asset when: it is probable that future economic benefits or service potential associated with the item will flow to the municipality; and the cost or fair value of the item can be measured reliably.

Property, plant and equipment are initially recognised at cost.

The cost of an item of property, plant and equipment is the purchase price and other costs attributable to bring the asset to the location and condition necessary for it to be capable of operating in the manner intended by management. Trade discounts and rebates are deducted in arriving at the cost.

Where an asset is acquired through a non-exchange transaction, its cost is its fair value as at date of acquisition.

Where an item of property, plant and equipment is acquired in exchange for a non-monetary asset or monetary assets, or a combination of monetary and non-monetary assets, the asset acquired is initially measured at fair value (the cost), unless the fair value of neither the asset received nor the asset given up is reliably measurable. If the acquired item is not measured at fair value, it's cost is measured at the carrying amount of the asset given up.

When significant components of an item of property, plant and equipment have different useful lives, they are accounted for as separate items (major components) of property, plant and equipment.

Costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it. If a replacement cost is recognised in the carrying amount of an item of property, plant and equipment, the carrying amount of the replaced part is derecognised.

The initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located is also included in the cost of property, plant and equipment, where the municipality is obligated to incur such expenditure, and where the obligation arises as a result of acquiring the asset or using it for purposes other than the production of inventories.

Recognition of costs in the carrying amount of an item of property, plant and equipment ceases when the item is in the location and condition necessary for it to be capable of operating in the manner intended by management.

Major spare parts and stand by equipment which are expected to be used for more than one period are included in property, plant and equipment. In addition, spare parts and stand by equipment which can only be used in connection with an item of property, plant and equipment are accounted for as property, plant and equipment.

Major inspection costs which are a condition of continuing use of an item of property, plant and equipment and which meet the recognition criteria above are included as a replacement in the cost

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

of the item of property, plant and equipment. Any remaining inspection costs from the previous inspection are derecognised.

Property, plant and equipment are carried at cost less accumulated depreciation and any impairment losses.

Property, plant and equipment are depreciated on a straight line basis over their expected useful lives to their estimated residual value. The annual depreciation rates are based on the following estimated average asset lives;

Infrastructure	Years
Roads and Paving	30
Pedestrian Malls	30
Electricity	20 -80
Water	15 – 100
Watercraft	15
Community	
Buildings	30
Recreational Facilities	20 – 30
Security	5
Other	
Buildings	25
Specialists vehicles	10
Other vehicles	4
Office Equipment	5
Furniture and Fittings	7-10
Watercraft	15
Bins and containers	5
Specialised plant and equipment	10 -15
Other items of plants and equipment	
Landfill sites	15

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

The residual value, the useful life of an asset and the depreciation method is reviewed annually and any changes are recognised as a change in accounting estimate in the Statement of Financial Performance.

The useful lives of items of property, plant and equipment have been assessed as follows:

Item Average useful life Buildings x years

The residual value, useful life and depreciation method of each asset are reviewed at the end of each reporting date. If the expectations differ from previous estimates, the change is accounted for as a change in accounting estimate.

Reviewing the useful life of an asset on an annual basis does not require the municipality to amend the previous estimate unless expectations differ from the previous estimate.

Each part of an item of property, plant and equipment with a cost that is significant in relation to the total cost of the item is depreciated separately.

The depreciation charge for each period is recognised in surplus or deficit unless it is included in the carrying amount of another asset.

Items of property, plant and equipment are derecognised when the asset is disposed of or when there are no further economic benefits or service potential expected from the use of the asset.

The gain or loss arising from the derecognition of an item of property, plant and equipment is included in surplus or deficit when the item is derecognised. The gain or loss arising from the derecognition of an item of property, plant and equipment is determined as the difference between the net disposal proceeds, if any, and the carrying amount of the item.

Site restoration and dismantling cost

The municipality has an obligation to dismantle, remove and restore items of property, plant and equipment. Such obligations are referred to as 'decommissioning, restoration and similar liabilities'. The cost of an item of property, plant and equipment includes the initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located, the obligation for which the municipality incurs either when the item is acquired or as a consequence of having used the item during a particular period for purposes other than to produce inventories during that period.

Site restoration and dismantling cost (continued)

If the related asset is measured using the cost model: (a) subject to (b), changes in the liability are added to, or deducted from, the cost of the related asset in the current period; (b) if a decrease in the liability exceeds the carrying amount of the asset, the excess is recognised immediately in surplus or deficit; and (c) if the adjustment results in an addition to the cost of an asset, the municipality considers whether this is an indication that the new carrying amount of the asset may not be fully recoverable. If it is such an indication, the asset is tested for impairment by estimating its recoverable amount or recoverable service amount, and any impairment loss is recognised in

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

accordance with the accounting policy on impairment of cash-generating assets and/or impairment of non-cash-generating assets.

2.7. Intangible assets

An asset is identifiable if it either: is separable, i.e. is capable of being separated or divided from the municipality and sold, transferred, licensed, rented or exchanged, either individually or together with a related contract, identifiable assets or liability, regardless of whether the municipality intends to do so; or arises from binding arrangements (including rights from contracts), regardless of whether those rights are transferable or separable from the municipality or from other rights and obligations.

A binding arrangement describes an arrangement that confers similar rights and obligations on the parties to it as if it were in the form of a contract.

An intangible asset is recognised when: it is probable that the expected future economic benefits or service potential that are attributable to the asset will flow to the municipality; and the cost or fair value can be measured reliably.

The municipality assesses the probability of expected future economic benefits or service potential using reasonable and supportable assumptions that represent management's best estimate of the set of economic conditions that will exist over the useful life of the asset.

Intangible assets are initially recognised at cost.

Where an intangible asset is acquired at no cost, or for a nominal cost, its cost is its fair value as at the date of acquisition.

Expenditure on research (or on the research phase of an internal project) is recognised as an expense when it is incurred.

An intangible asset arising from development (or from the development phase of an internal project) is recognised when: it is technically feasible to complete the asset so that it will be available for use or sale; there is an intention to complete and use or sell it; there is an ability to use or sell it; it will generate probable future economic benefits or service potential; there are available technical, financial and other resources to complete the development and to use or sell the asset; and the expenditure attributable to the asset during its development can be measured reliably.

Intangible assets are carried at cost less any accumulated amortisation and any impairment losses.

An intangible asset is regarded as having an indefinite useful life when, based on all relevant factors, there is no foreseeable limit to the period over which the asset is expected to generate net cash inflows or service potential. Amortisation is not provided for these intangible assets, but they are tested for impairment annually and whenever there is an indication that the asset may be impaired.

The amortisation period and the amortisation method for intangible assets are reviewed at each reporting date.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Reassessing the useful life of an intangible asset with a finite useful life after it was classified as indefinite is an indicator that the asset may be impaired. As a result the asset is tested for impairment and the remaining carrying amount is amortised over its useful life.

Intangible assets (continued)

Internally generated brands, mastheads, publishing titles, customer lists and items similar in substance are not recognised as intangible assets.

Amortisation is provided to write down the intangible assets, on a straight line basis to their estimated residual values, as follows:

Item Useful life Computer software x years

Intangible assets are derecognised: on disposal; or when no future economic benefits or service potential are expected from its use or disposal.

The gain or loss arising from the derecognition of an intangible asset is determined as the difference between the net disposal proceeds, if any, and the carrying amount of the intangible asset. Such difference is recognised in surplus or deficit when the intangible asset is derecognised.

2.8. Leases

A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to ownership. A lease is classified as an operating lease if it does not transfer substantially all the risks and rewards incidental to ownership.

When a lease includes both land and building elements, the municipality assesses the classification of each element separately.

Finance leases - lessor

The municipality recognises finance lease receivables as assets in the statement of financial position. Such assets are presented as a receivable at an amount equal to the net investment in the lease.

Finance revenue is recognised based on a pattern reflecting a constant periodic rate of return on the municipality's net investment in the finance lease.

Finance leases - lessee

Finance leases are recognised as assets and liabilities in the statement of financial position at amounts equal to the fair value of the leased property or, if lower, the present value of the minimum lease payments. The corresponding liability to the lessor is included in the statement of financial position as a finance lease obligation.

The discount rate used in calculating the present value of the minimum lease payments is the municipality's incremental borrowing rate.

Minimum lease payments are apportioned between the finance charge and reduction of the outstanding liability. The finance charge is allocated to each period during the lease term so as to produce a constant periodic rate of on the remaining balance of the liability.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Any contingent rents are recognised separately as an expense in the period in which they are incurred.

Operating leases - lessor

Operating lease revenue is recognised as revenue on a straight-line basis over the lease term. The difference between the amounts recognised as revenue and the contractual receipts are recognised as an operating lease asset or liability.

Initial direct costs incurred in negotiating and arranging operating leases are added to the carrying amount of the leased asset and recognised as an expense over the lease term on the same basis as the lease revenue.

The aggregate cost of incentives is recognised as a reduction of rental revenue over the lease term on a straight-line basis.

Any contingent rents are recognised separately as revenue in the period in which they are received.

Operating leases - lessee

Operating lease payments are recognised as an expense on a straight-line basis over the lease term. The difference between the amounts recognised as an expense and the contractual payments are recognised as an operating lease asset or liability.

The aggregate benefit of incentives is recognised as a reduction of rental expense over the lease term on a straight-line basis over the lease term.

Any contingent rents are recognised separately as an expense in the period in which they are incurred.

2.9. Employee benefits

Short-term employee benefits

Short-term employee benefits are employee benefits (other than termination benefits) that are due to be settled within twelve months after the end of the period in which the employees render the related service.

Short-term employee benefits include items such as: wages, salaries and social security contributions; short-term compensated absences (such as paid annual leave and paid sick leave) where the compensation for the absences is due to be settled within twelve months after the end of the reporting period in which the employees render the related employee service; bonus, incentive and performance related payments payable within twelve months after the end of the reporting period in which the employees render the related service; and non-monetary benefits (for example, medical care, and free or subsidised goods or services such as housing, cars and cellphones) for current employees.

When an employee has rendered service to the municipality during a reporting period, the municipality recognises the undiscounted amount of short-term employee benefits expected to be paid in exchange for that service: as a liability (accrued expense), after deducting any amount

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

already paid. If the amount already paid exceeds the undiscounted amount of the benefits, the municipality recognises that excess as an asset (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund; and as an expense, unless another Standard requires or permits the inclusion of the benefits in the cost of an asset.

The expected cost of compensated absences is recognised as an expense as the employees render services that increase their entitlement or, in the case of non-accumulating absences, when the absence occurs. The municipality measures the expected cost of accumulating compensated absences as the additional amount that the municipality expects to pay as a result of the unused entitlement that has accumulated at the reporting date.

The municipality recognises the expected cost of bonus, incentive and performance related payments when the municipality has a present legal or constructive obligation to make such payments as a result of past events and a reliable estimate of the obligation can be made. A present obligation exists when the municipality has no realistic alternative but to make the payments.

Post-employment benefits

Post-employment benefits are employee benefits (other than termination benefits) which are payable after the completion of employment.

Post-employment benefit plans are formal or informal arrangements under which the municipality provides post-employment benefits for one or more employees.

Multi-employer plans are defined contribution plans (other than state plans and composite social security programmes) or defined benefit plans (other than state plans) that pool the assets contributed by various entities that are not under common control and use those assets to provide benefits to employees of more than one entity, on the basis that contribution and benefit levels are determined without regard to the identity of the entity that employs the employees concerned.

Multi-employer plans and/or State plans and/or Composite social security programmes

The municipality classifies a multi-employer plan and/or state plans and/or composite social security programmes as a defined contribution plan or a defined benefit plan under the terms of the plan (including any constructive obligation that goes beyond the formal terms).

Where a plan is a defined contribution plan, the municipality accounts for in the same way as for any other defined contribution plan.

Where a plan is a defined benefit plan, the municipality accounts for its proportionate share of the defined benefit obligation, plan assets and cost associated with the plan in the same way as for any other defined benefit plan.

When sufficient information is not available to use defined benefit accounting for a plan, that is a defined benefit plan, the municipality accounts for the plan as if it was a defined contribution plan.

Post-employment benefits: Defined contribution plans

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Defined contribution plans are post-employment benefit plans under which the municipality pays fixed contributions into a separate entity (a fund) and will have no legal or constructive obligation to pay further contributions if the fund does not hold sufficient assets to pay all employee benefits relating to employee service in the current and prior periods.

When an employee has rendered service to the municipality during a reporting period, the municipality recognises the contribution payable to a defined contribution plan in exchange for that service: as a liability (accrued expense), after deducting any contribution already paid. If the contribution already paid exceeds the contribution due for service before the reporting date, the municipality recognises that excess as an asset (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund; and as an expense, unless another Standard requires or permits the inclusion of the contribution in the cost of an asset.

Where contributions to a defined contribution plan do not fall due wholly within twelve months after the end of the reporting period in which the employees render the related service, they are discounted. The rate used to discount reflects the time value of money. The currency and term of the financial instrument selected to reflect the time value of money is consistent with the currency and estimated term of the obligation.

Post-employment benefits: Defined benefit plans

Defined benefit plans are post-employment benefit plans other than defined contribution plans.

Actuarial gains and losses comprise experience adjustments (the effects of differences between the previous actuarial assumptions and what has actually occurred) and the effects of changes in actuarial assumptions. In measuring its defined benefit liability the municipality recognises actuarial gains and losses in surplus or deficit in the reporting period in which they occur.

Current service cost is the increase in the present value of the defined benefit obligation resulting from employee service in the current period.

Interest cost is the increase during a period in the present value of a defined benefit obligation which arises because the benefits are one period closer to settlement.

Past service cost is the change in the present value of the defined benefit obligation for employee service in prior periods, resulting in the current period from the introduction of, or changes to, post-employment benefits or other long-term employee benefits. Past service cost may be either positive (when benefits are introduced or changed so that the present value of the defined benefit obligation increases) or negative (when existing benefits are changed so that the present value of the defined benefit obligation decreases). In measuring its defined benefit liability the municipality recognises past service cost as an expense in the reporting period in which the plan is amended.

Plan assets comprise assets held by a long-term employee benefit fund and qualifying insurance policies.

The present value of a defined benefit obligation is the present value, without deducting any plan assets, of expected future payments required to settle the obligation resulting from employee service in the current and prior periods.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

The return on plan assets is interest, dividends or similar distributions and other revenue derived from the plan assets, together with realised and unrealised gains or losses on the plan assets, less any costs of administering the plan (other than those included in the actuarial assumptions used to measure the defined benefit obligation) and less any tax payable by the plan itself.

The amount recognised as a defined benefit liability is the net total of the following amounts: the present value of the defined benefit obligation at the reporting date; minus the fair value at the reporting date of plan assets (if any) out of which the obligations are to be settled directly; plus any liability that may arise as a result of a minimum funding requirement

The amount determined as a defined benefit liability may be negative (an asset). The municipality measures the resulting asset at the lower of: the amount determined above; and the present value of any economic benefits available in the form of refunds from the plan or reductions in future contributions to the plan. The present value of these economic benefits is determined using a discount rate which reflects the time value of money.

Any adjustments arising from the limit above is recognised in surplus or deficit.

The municipality determine the present value of defined benefit obligations and the fair value of any plan assets with sufficient regularity such that the amounts recognised in the annual financial statements do not differ materially from the amounts that would be determined at the reporting date.

The municipality recognises the net total of the following amounts in surplus or deficit, except to the extent that another Standard requires or permits their inclusion in the cost of an asset:

- current service cost;
- interest cost;
- the expected return on any plan assets and on any reimbursement rights;
- actuarial gains and losses, which is recognised immediately;
- past service cost, which is recognised immediately;
- the effect of any curtailments or settlements; and
- the effect of applying the limit on a defined benefit asset (negative defined benefit liability).

The municipality uses the Projected Unit Credit Method to determine the present value of its defined benefit obligations and the related current service cost and, where applicable, past service cost. The Projected Unit Credit Method (sometimes known as the accrued benefit method pro-rated on service or as the benefit/years of service method) sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately to build up the final obligation.

In determining the present value of its defined benefit obligations and the related current service cost and, where applicable, past service cost, the municipality attributes benefit to periods of service under the plan's benefit formula. However, if an employee's service in later years will lead to a materially higher level of benefit than in earlier years, the municipality attributes benefit on a straight-line basis from: the date when service by the employee first leads to benefits under the plan (whether or not the benefits are conditional on further service); until the date when further

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

service by the employee will lead to no material amount of further benefits under the plan, other than from further salary increases.

Actuarial valuations are conducted on an annual basis by independent actuaries separately for each plan. The results of the valuation are updated for any material transactions and other material changes in circumstances (including changes in market prices and interest rates) up to the reporting date.

The municipality recognises gains or losses on the curtailment or settlement of a defined benefit plan when the curtailment or settlement occurs. The gain or loss on a curtailment or settlement comprises: any resulting change in the present value of the defined benefit obligation; and any resulting change in the fair value of the plan assets.

Before determining the effect of a curtailment or settlement, the municipality re-measures the obligation (and the related plan assets, if any) using current actuarial assumptions (including current market interest rates and other current market prices).

When it is virtually certain that another party will reimburse some or all of the expenditure required to settle a defined benefit obligation, the right to reimbursement is recognised as a separate asset. The asset is measured at fair value. In all other respects, the asset is treated in the same way as plan assets. In surplus or deficit, the expense relating to a defined benefit plan is presented as the net of the amount recognised for a reimbursement.

The municipality offsets an asset relating to one plan against a liability relating to another plan when the municipality has a legally enforceable right to use a surplus in one plan to settle obligations under the other plan and intends either to settle the obligations on a net basis, or to realise the surplus in one plan and settle its obligation under the other plan simultaneously.

Actuarial assumptions

Actuarial assumptions are unbiased and mutually compatible.

Financial assumptions are based on market expectations, at the reporting date, for the period over which the obligations are to be settled.

The rate used to discount post-employment benefit obligations (both funded and unfunded) reflect the time value of money. The currency and term of the financial instrument selected to reflect the time value of money is consistent with the currency and estimated term of the post-employment benefit obligations.

Post-employment benefit obligations are measured on a basis that reflects:

- estimated future salary increases; the benefits set out in the terms of the plan (or resulting from any constructive obligation that goes beyond those terms) at the reporting date; and
- estimated future changes in the level of any state benefits that affect the benefits payable under a defined benefit plan, if, and only if, either:
- those changes were enacted before the reporting date; or

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

 past history, or other reliable evidence, indicates that those state benefits will change in some predictable manner, for example, in line with future changes in general price levels or general salary levels.

Assumptions about medical costs take account of estimated future changes in the cost of medical services, resulting from both inflation and specific changes in medical costs.

Other long-term employee benefits

The municipality has an obligation to provide long-term service allowance benefits to all of its employees. According to the rules of the long-term service allowance scheme, which the municipality instituted and operates, an employee (who is on the current conditions of service), is entitled to a cash allowance, calculated in terms of the rules of the scheme, after 10, 15, 20, 25 and 30 years of continued service.

The municipality's liability is based on an actuarial valuation. The Projected Unit Credit Method is used to value the liabilities. Actuarial gains and losses on the long-term service awards are recognised in the statement of financial performance.

The amount recognised as a liability for long-term service awards is the net total of the following amounts:

- the present value of the defined benefit obligation at the reporting date;
- minus the fair value at the reporting date of plan assets (if any) out of which the obligations are to be settled directly.

The municipality recognises the net total of the following amounts as expense or revenue, except to the extent that another Standard requires or permits their inclusion in the cost of an asset:

- current service cost;
- interest cost;
- the expected return on any plan assets and on any reimbursement right recognised as an asset;
- actuarial gains and losses, which is recognised immediately;
- past service cost, which is recognised immediately; and
- the effect of any curtailments or settlements.

Termination benefits

The municipality recognises termination benefits as a liability and an expense when the municipality is demonstrably committed to either:

- terminate the employment of an employee or group of employees before the normal retirement date; or
- provide termination benefits as a result of an offer made in order to encourage voluntary redundancy.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

The municipality is demonstrably committed to a termination when the municipality has a detailed formal plan for the termination and is without realistic possibility of withdrawal. The detailed plan includes [as a minimum]:

- the location, function, and approximate number of employees whose services are to be terminated;
- the termination benefits for each job classification or function; and
- the time at which the plan will be implemented.

Implementation begins as soon as possible and the period of time to complete implementation is such that material changes to the plan are not likely.

Where termination benefits fall due more than twelve months after the reporting date, they are discounted using an appropriate discount rate. The rate used to discount the benefit reflects the time value of money. The currency and term of the financial instrument selected to reflect the time value of money is consistent with the currency and estimated term of the benefit.

In the case of an offer made to encourage voluntary redundancy, the measurement of termination benefits is based on the number of employees expected to accept the offer.

2.10. Provisions and contingencies

Provisions are recognised when:

- the municipality has a present obligation as a result of a past event;
- it is probable that an outflow of resources embodying economic benefits or service potential will be required to settle the obligation; and
- a reliable estimate can be made of the obligation.

The amount of a provision is the best estimate of the expenditure expected to be required to settle the present obligation at the reporting date.

Where the effect of time value of money is material, the amount of a provision is the present value of the expenditures expected to be required to settle the obligation.

The discount rate is a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the liability.

Where some or all of the expenditure required to settle a provision is expected to be reimbursed by another party, the reimbursement is recognised when, and only when, it is virtually certain that reimbursement will be received if the municipality settles the obligation. The reimbursement is treated as a separate asset. The amount recognised for the reimbursement does not exceed the amount of the provision.

Provisions are reviewed at each reporting date and adjusted to reflect the current best estimate. Provisions are reversed if it is no longer probable that an outflow of resources embodying economic benefits or service potential will be required, to settle the obligation.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Where discounting is used, the carrying amount of a provision increases in each period to reflect the passage of time. This increase is recognised as an interest expense.

A provision is used only for expenditures for which the provision was originally recognised.

Provisions are not recognised for future operating expenditure.

If the municipality has a contract that is onerous, the present obligation (net of recoveries) under the contract is recognised and measured as a provision.

A constructive obligation to restructure arises only when the municipality: has a detailed formal plan for the restructuring, identifying at least: - the activity/operating unit or part of a activity/operating unit concerned; - the principal locations affected; - the location, function, and approximate number of employees who will be compensated for services being terminated; - the expenditures that will be undertaken; and - when the plan will be implemented; and has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

A restructuring provision includes only the direct expenditures arising from the restructuring, which are those that are both:

- necessarily entailed by the restructuring; and
- not associated with the ongoing activities of the municipality

A contingent asset is a possible asset that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the municipality.

A contingent liability:

- a possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the municipality; or
- a present obligation that arises from past events but is not recognised because: it is not
 probable than an outflow of resources embodying economic benefits or service potential
 will be required to settle the obligation; the amount of the obligation cannot be measured
 with sufficient reliability.

Contingent assets and contingent liabilities are not recognised. Contingencies are disclosed in note.

2.11. Revenue from exchange transactions

Revenue is the gross inflow of economic benefits or service potential during the reporting period when those inflows result in an increase in net assets, other than increases relating to contributions from owners.

An exchange transaction is one in which the municipality receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of goods, services or use of assets) to the other party in exchange.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Measurement

Revenue is measured at the fair value of the consideration received or receivable, net of trade discounts and volume rebates.

Sale of goods

Revenue from the sale of goods is recognised when all the following conditions have been satisfied:

- the municipality has transferred to the purchaser the significant risks and rewards of ownership of the goods;
- the municipality retains neither continuing managerial involvement to the degree usually associated with ownership nor effective control over the goods sold;
- the amount of revenue can be measured reliably;
- it is probable that the economic benefits or service potential associated with the transaction will flow to the municipality; and the costs incurred or to be incurred in respect of the

Gifts and donations, including goods in-kind

Gifts and donations, including goods in kind, are recognised as assets and revenue when it is probable that the future economic benefits or service potential will flow to the municipality and the fair value of the assets can be measured reliably.

2.12. Services in-kind

Services in-kind are not recognised.

Revenue comprises gross inflows of economic benefits or service potential received and receivable by the municipality, which represents an increase in net assets, other than increases relating to contributions from owners.

Conditions on transferred assets are stipulations that specify that the future economic benefits or service potential embodied in the asset is required to be consumed by the recipient as specified or future economic benefits or service potential must be returned to the transferor.

Non-exchange transactions are transactions that are not exchange transactions. In a non-exchange transaction, the municipality either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

Restrictions on transferred assets are stipulations that limit or direct the purposes for which a transferred asset may be used, but do not specify that future economic benefits or service potential is required to be returned to the transferor if not deployed as specified.

Stipulations on transferred assets are terms in laws or regulation, or a binding arrangement, imposed upon the use of a transferred asset by entities external to the municipality.

The taxable event is the event that the government, legislature or other authority has determined will be subject to taxation.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Taxes are economic benefits or service potential compulsorily paid or payable to entities, in accordance with laws and or regulations, established to provide revenue to government. Taxes do not include fines or other penalties imposed for breaches of the law.

Transfers are inflows of future economic benefits or service potential from non-exchange transactions, other than taxes.

Recognition

An inflow of resources from a non-exchange transaction recognised as an asset is recognised as revenue, except to the extent that a liability is also recognised in respect of the same inflow.

As the municipality satisfies a present obligation recognised as a liability in respect of an inflow of resources from a non-exchange transaction recognised as an asset, it reduces the carrying amount of the liability recognised and recognises an amount of revenue equal to that reduction.

Revenue received from conditional grants, donations and funding are recognised as revenue to the extent that the municipality has complied with any of the criteria, conditions or obligations embodied in the agreement. To the extent that the criteria, conditions or obligations have not been met a liability is recognised.

Measurement

Revenue from a non-exchange transaction is measured at the amount of the increase in net assets recognised by the municipality.

When, as a result of a non-exchange transaction, the municipality recognises an asset, it also recognises revenue equivalent to the amount of the asset measured at its fair value as at the date of acquisition, unless it is also required to recognise a liability. Where a liability is required to be recognised it will be measured as the best estimate of the amount required to settle the obligation at the reporting date, and the amount of the increase in net assets, if any, recognised as revenue. When a liability is subsequently reduced, because the taxable event occurs or a condition is satisfied, the amount of the reduction in the liability is recognised as revenue.

Transfers

Apart from services in kind, which are not recognised, the municipality recognises an asset in respect of transfers when the transferred resources meet the definition of an asset and satisfy the criteria for recognition as an asset.

Transferred assets are measured at their fair value as at the date of acquisition.

2.13. Collection charges and penalties

Collection charges and penalty interest is recognised when:

- it is probable that the economic benefits or service potential associated with the transaction will flow to the municipality; and
- the amount of the revenue can be measured reliably; and
- to the extent that there has been compliance with the relevant legal requirements (if applicable).

Fines are recognised as revenue when the receivable meets the definition of an asset and satisfies the criteria for recognition as an asset.

The municipality makes use of estimates to determine the amount of revenue that it is entitled to collect. Where settlement discounts or reductions in the amount payable are offered, the municipality considers past history in assessing the likelihood of these discounts or reductions being taken up by debtors.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Where the municipality collects fines in the capacity of an agent, the fines will not be revenue of the municipality.

2.14. Gifts and donations, including goods in-kind

Gifts and donations, including goods in kind, are recognised as assets and revenue when it is probable that the future economic benefits or service potential will flow to the municipality and the fair value of the assets can be measured reliably.

2.15. Services in-kind

Services in-kind are not recognised.

2.16. Concessionary loans received

A concessionary loan is a loan granted to or received by the municipality on terms that are not market related.

The portion of the loan that is repayable, along with any interest payments, is an exchange transaction and is accounted for in accordance with the Standard of GRAP on Financial Instruments. The off-market portion of the loan is a non-exchange transaction. The off-market portion of the loan that is recognised as non-exchange revenue is calculated as the difference between the proceeds received from the loan, and the present value of the contractual cash flows of the loan, discounted using a market related rate of interest.

The recognition of revenue is determined by the nature of any conditions that exist in the loan agreement that may give rise to a liability. Where a liability exists the municipality recognises revenue as and when it satisfies the conditions of the loan agreement.

2.17. Borrowing costs

Borrowing costs are recognised as an expense in the period in which they are incurred.

2.18. Unauthorised expenditure

Unauthorised expenditure means: overspending of a vote or a main division within a vote; and expenditure not in accordance with the purpose of a vote or, in the case of a main division, not in accordance with the purpose of the main division.

All expenditure relating to unauthorised expenditure is recognised as an expense in the statement of financial performance in the year that the expenditure was incurred. The expenditure is classified in accordance with the nature of the expense, and where recovered, it is subsequently accounted for as revenue in the statement of financial performance.

2.19. Fruitless and wasteful expenditure

Fruitless expenditure means expenditure which was made in vain and would have been avoided had reasonable care been exercised.

All expenditure relating to fruitless and wasteful expenditure is recognised as an expense in the statement of financial performance in the year that the expenditure was incurred. The expenditure is classified in accordance with the nature of the expense, and where recovered, it is subsequently accounted for as revenue in the statement of financial performance.

2.20. Irregular expenditure

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Irregular expenditure is expenditure that is contrary to the Municipal Finance Management Act (Act No.56 of 2003), the Municipal Systems Act (Act No.32 of 2000), and the Public Office Bearers Act (Act No. 20 of 1998) or is in contravention of the municipality's supply chain management policy. Irregular expenditure excludes unauthorised expenditure.

All expenditure relating to irregular expenditure is recognised as an expense in the statement of financial performance in the year that the expenditure was incurred. The expenditure is classified in accordance with the nature of the expense, and where recovered, it is subsequently accounted for as revenue in the statement of financial performance.

2.21. Grants in aid

The municipality transfers money to individuals, organisations and other sectors of government from time to time. When making these transfers, the municipality does not: receive any goods or services directly in return, as would be expected in a purchase or sale transaction; expect to be repaid in future; or expect a financial return, as would be expected from an investment.

These transfers are recognised in the statement of financial performance as expenses in the period that the events giving raise to the transfer occurred.

2.22. Commitments

Items are classified as commitments where the municipality commits itself to future transactions that will normally result in the outflow of resources.

Commitments are not recognised in the statement of financial position as a liability, but are included in the disclosure notes in the following cases:

- approved and contracted commitments:
- where the expenditure has been approved and the contract has been awarded at the reporting date; and
- where disclosure is required by a specific standard of GRAP.

2.23. Budget information

The approved budget is prepared on the accrual basis and presented by economic classification linked to performance outcome objectives.

The approved budget covers the fiscal period from 2013/07/01 to 2014/06/30.

The annual financial statements and the budget are on the same basis of accounting therefore a comparison with the budgeted amounts for the reporting period have been included in the Statement of comparison of budget and actual amounts.

2.24. Related parties

The municipality (in this standard referred to as the reporting entity) applies this standard in:

- identifying related party relationships and transactions;
- identifying outstanding balances, including commitments, between the municipality and its related parties;

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

- identifying the circumstances in which disclosure of the items in bullet one and two is required; and
- determining the disclosures to be made about those items.

This standard requires disclosure of related party relationships, transactions and outstanding balances, including commitments, in the consolidated and separate financial statements of the reporting entity in accordance with the Standard of GRAP on Consolidated and Separate Financial Statements. This standard also applies to individual annual financial statements.

Disclosure of related party transactions, outstanding balances, including commitments, and relationships with related parties may affect users' assessments of the financial position and performance of the reporting entity and its ability to deliver agreed services, including assessments of the risks and opportunities facing the entity. This disclosure also ensures that the reporting entity is transparent about its dealings with related parties.

The standard states that a related party is a person or an entity with the ability to control or jointly control the other party, or exercise significant influence over the other party, or vice versa, or an entity that is subject to common control, or joint control. As a minimum, the following are regarded as related parties of the reporting entity:

- A person or a close member of that person's family is related to the reporting entity if that person:
 - has control or joint control over the reporting entity;
 - has significant influence over the reporting entity;
 - is a member of the management of the entity or its controlling entity.
- An entity is related to the reporting entity if any of the following conditions apply:
 - the entity is a member of the same economic entity (which means that each controlling entity, controlled
 - entity and fellow controlled entity is related to the others);
 - one entity is an associate or joint venture of the other entity (or an associate or joint venture of a member of
 - an economic entity of which the other entity is a member);
 - both entities are joint ventures of the same third party;
 - one entity is a joint venture of a third entity and the other entity is an associate of the third entity;
 - the entity is a post-employment benefit plan for the benefit of employees of either the entity or an entity related to the entity. If the reporting entity is itself such a plan, the sponsoring employers are related to the entity;
 - the entity is controlled or jointly controlled by a person identified in (a); and
 - a person identified in (a)(i) has significant influence over that entity or is a member of the management of that entity (or its controlling entity).

The standard states that a related party transaction is a transfer of resources, services or obligations between the reporting entity and a related party, regardless of whether a price is charged. The standard elaborates on the definitions and identification of:

- Close member of the family of a person;
- Management;
- Related parties;
- Remuneration; and

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Significant influence

The standard sets out the requirements, inter alia, for the disclosure of:

- control:
- related party transactions; and
- · remuneration of management.

Only transactions with related parties where the transactions are not concluded within normal operating procedures or on terms that are not no more or no less favourable than the terms it would use to conclude transactions with another entity or person are disclosed.

The standard requires that remuneration of management must be disclosed per person and in aggregate.

The standard has been approved by the Accounting Standards Board but its effective date has not yet been determined by the Minister of Finance.

The municipality expects to adopt the standard for the first time once it becomes effective. It is unlikely that the standard will have a material impact on the municipality's annual financial statements.

2.25. Events after the reporting date

Events after the reporting date that are classified as adjusting events have been accounted for in the financial statements.

Events after the reporting date that are classified as non-adjusting events have been disclosed in the notes to the financial statements.

2.26. Transfer of functions between entities not under common control

A transfer of functions is the reorganisation and/or the re-allocation of functions between entities by transferring functions between entities or into another municipality.

Not under common control - For a transaction or event to occur between entities not under common control, the transaction or event needs to be undertaken between entities not within the same sphere of government or between entities that are not part of the same economic entity. Entities that are not ultimately controlled by the same entity before and after the transfer of functions are not within the same economic entity.

The acquiree's identifiable assets, liabilities and contingent liabilities which meet the recognition conditions are recognised at their fair values at acquisition date, except for non-current assets (or disposal groups) that are classified as held-for-sale in accordance with the Standard of GRAP on Non-current Assets Held-For-Sale and Discontinued Operations, which are recognised at fair value less costs to sell.

Assets and liabilities, which cannot be measured reliably, are recorded at provisional amounts which are finalised within 24 months of the acquisition date.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Contingent liabilities are only included in the identifiable assets and liabilities of the acquiree where there is a present obligation at acquisition date.

The excess is determined as the consideration paid, plus the fair value of any interest held prior to obtaining control, plus non-controlling interest less the fair value of the identifiable assets and liabilities of the acquiree.

2.27. Impairment of cash-generating assets

Cash-generating assets are those assets held by the municipality with the primary objective of generating a commercial return.

When an asset is deployed in a manner consistent with that adopted by a profit-orientated entity, it generates a commercial return.

Identification

When the carrying amount of a cash-generating asset exceeds its recoverable amount, it is impaired. The municipality assesses at each reporting date whether there is any indication that a cash-generating asset may be impaired. If any such indication exists, the municipality estimates the recoverable amount of the asset.

Irrespective of whether there is any indication of impairment, the municipality also tests a cash-generating intangible asset with an indefinite useful life or a cash-generating intangible asset not yet available for use for impairment annually by comparing its carrying amount with its recoverable amount. This impairment test is performed at the same time every year. If an intangible asset was initially recognised during the current reporting period, that intangible asset was tested for impairment before the end of the current reporting period.

Value in use

Value in use of a cash-generating asset is the present value of the estimated future cash flows expected to be derived from the continuing use of an asset and from its disposal at the end of its useful life.

When estimating the value in use of an asset, the municipality estimates the future cash inflows and outflows to be derived from continuing use of the asset and from its ultimate disposal and the municipality applies the appropriate discount rate to those future cash flows.

Discount rate

The discount rate is a pre-tax rate that reflects current market assessments of the time value of money, represented by the current risk-free rate of interest and the risks specific to the asset for which the future cash flow estimates have not been adjusted.

Recognition and measurement (individual asset)

If the recoverable amount of a cash-generating asset is less than its carrying amount, the carrying amount of the asset is reduced to its recoverable amount. This reduction is an impairment loss.

An impairment loss is recognised immediately in surplus or deficit.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

After the recognition of an impairment loss, the depreciation (amortisation) charge for the cash-generating asset is adjusted in future periods to allocate the cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Cash-generating units

If there is any indication that an asset may be impaired, the recoverable amount is estimated for the individual asset. If it is not possible to estimate the recoverable amount of the individual asset, the municipality determines the recoverable amount of the cash-generating unit to which the asset belongs (the asset's cash-generating unit).

If an active market exists for the output produced by an asset or group of assets, that asset or group of assets is identified as a cash-generating unit, even if some or all of the output is used internally. If the cash inflows generated by any asset or cash generating unit are affected by internal transfer pricing, the municipality uses management's best estimate of future price(s) that could be achieved in arm's length transactions in estimating:

the future cash inflows used to determine the asset's or cash-generating unit's value in use; and the future cash outflows used to determine the value in use of any other assets or cash-generating units that are affected by the internal transfer pricing.

Cash-generating units are identified consistently from period to period for the same asset or types of assets, unless a change is justified.

The carrying amount of a cash-generating unit is determined on a basis consistent with the way the recoverable amount of the cash-generating unit is determined.

An impairment loss is recognised for a cash-generating unit if the recoverable amount of the unit is less than the carrying amount of the unit. The impairment is allocated to reduce the carrying amount of the cash-generating assets of the unit on a pro rata basis, based on the carrying amount of each asset in the unit. These reductions in carrying amounts are treated as impairment losses on individual assets.

In allocating an impairment loss, the municipality does not reduce the carrying amount of an asset below the highest of:

- its fair value less costs to sell (if determinable);
- its value in use (if determinable); and
- zero.

The amount of the impairment loss that would otherwise have been allocated to the asset is allocated pro rata to the other cash-generating assets of the unit.

Where a non-cash-generating asset contributes to a cash-generating unit, a proportion of the carrying amount of that noncash-generating asset is allocated to the carrying amount of the cash-generating unit prior to estimation of the recoverable amount of the cash-generating unit.

Reversal of impairment loss

The municipality assesses at each reporting date whether there is any indication that an impairment loss recognised in prior periods for a cash-generating asset may no longer exist or may have

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

decreased. If any such indication exists, the municipality estimates the recoverable amount of that asset.

An impairment loss recognised in prior periods for a cash-generating asset is reversed if there has been a change in the estimates used to determine the asset's recoverable amount since the last impairment loss was recognised. The carrying amount of the asset is increased to its recoverable amount. The increase is a reversal of an impairment loss. The increased carrying amount of an asset attributable to a reversal of an impairment loss does not exceed the carrying amount that would have been determined (net of depreciation or amortisation) had no impairment loss been recognised for the asset in prior periods.

A reversal of an impairment loss for a cash-generating asset is recognised immediately in surplus or deficit.

After a reversal of an impairment loss is recognised, the depreciation (amortisation) charge for the cash-generating asset is adjusted in future periods to allocate the cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

A reversal of an impairment loss for a cash-generating unit is allocated to the cash-generating assets of the unit pro rata with the carrying amounts of those assets. These increases in carrying amounts are treated as reversals of impairment losses for individual assets. No part of the amount of such a reversal is allocated to a non-cash-generating asset contributing service potential to a cash-generating unit.

In allocating a reversal of an impairment loss for a cash-generating unit, the carrying amount of an asset is not increased above the lower of:

its recoverable amount (if determinable); and

the carrying amount that would have been determined (net of amortisation or depreciation) had no impairment loss been recognised for the asset in prior periods.

The amount of the reversal of the impairment loss that would otherwise have been allocated to the asset is allocated pro rata to the other assets of the unit.

2.28. Impairment of non-cash-generating assets

Non-cash-generating assets are assets other than cash-generating assets.

Identification

When the carrying amount of a non-cash-generating asset exceeds its recoverable service amount, it is impaired.

The municipality assesses at each reporting date whether there is any indication that a non-cash-generating asset may be impaired. If any such indication exists, the municipality estimates the recoverable service amount of the asset.

Irrespective of whether there is any indication of impairment, the municipality also tests a non-cash-generating intangible asset with an indefinite useful life or a non-cash-generating intangible asset not yet available for use for impairment annually by comparing its carrying amount with its recoverable service amount. This impairment test is performed at the same time every year. If an

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

intangible asset was initially recognised during the current reporting period, that intangible asset was tested for impairment before the end of the current reporting period.

Value in use

Value in use of non-cash-generating assets is the present value of the non-cash-generating assets remaining service potential.

The present value of the remaining service potential of a non-cash-generating asset is determined using the following approach:

Depreciated replacement cost approach

The present value of the remaining service potential of a non-cash-generating asset is determined as the depreciated replacement cost of the asset. The replacement cost of an asset is the cost to replace the asset's gross service potential. This cost is depreciated to reflect the asset in its used condition. An asset may be replaced either through reproduction (replication) of the existing asset or through replacement of its gross service potential. The depreciated replacement cost is measured as the reproduction or replacement cost of the asset, whichever is lower, less accumulated depreciation calculated on the basis of such cost, to reflect the already consumed or expired service potential of the asset.

The replacement cost and reproduction cost of an asset is determined on an "optimised" basis. The rationale is that the municipality would not replace or reproduce the asset with a like asset if the asset to be replaced or reproduced is an overdesigned or overcapacity asset. Overdesigned assets contain features which are unnecessary for the goods or services the asset provides. Overcapacity assets are assets that have a greater capacity than is necessary to meet the demand for goods or services the asset provides. The determination of the replacement cost or reproduction cost of an asset on an optimised basis thus reflects the service potential required of the asset.

Recognition and measurement

If the recoverable service amount of a non-cash-generating asset is less than its carrying amount, the carrying amount of the asset is reduced to its recoverable service amount. This reduction is an impairment loss.

An impairment loss is recognised immediately in surplus or deficit.

After the recognition of an impairment loss, the depreciation (amortisation) charge for the non-cash-generating asset is adjusted in future periods to allocate the non-cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Reversal of an impairment loss

The municipality assesses at each reporting date whether there is any indication that an impairment loss recognised in prior periods for a non-cash-generating asset may no longer exist or may have decreased. If any such indication exists, the municipality estimates the recoverable service amount of that asset.

An impairment loss recognised in prior periods for a non-cash-generating asset is reversed if there has been a change in the estimates used to determine the asset's recoverable service amount since the last impairment loss was recognised. The carrying amount of the asset is increased to its recoverable service amount. The increase is a reversal of an impairment loss.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

The increased carrying amount of an asset attributable to a reversal of an impairment loss does not exceed the carrying amount that would have been determined (net of depreciation or amortisation) had no impairment loss been recognised for the asset in prior periods.

A reversal of an impairment loss for a non-cash-generating asset is recognised immediately in surplus or deficit.

After a reversal of an impairment loss is recognised, the depreciation (amortisation) charge for the non-cash-generating asset is adjusted in future periods to allocate the non-cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

2.29. Financial instruments

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or a residual interest of another entity.

Classification

The municipality has the following types of financial assets (classes and category) as reflected on the face of the statement of financial position or in the notes thereto:

Class Category

Receivables from exchange transactions Financial asset measured at amortised cost Receivables from non-exchange transactions Financial asset measured at amortised cost Cash and cash equivalents Financial asset measured at fair value

The municipality has the following types of financial liabilities (classes and category) as reflected on the face of the statement of financial position or in the notes thereto:

Class Category

Payables from exchange transactions Financial liability measured at amortised cost Finance lease obligation Financial liability measured at amortised cost Bank overdraft Financial liability measured at amortised cost

Initial recognition

The municipality recognises a financial asset or a financial liability in its statement of financial position when the municipality

becomes a party to the contractual provisions of the instrument.

The municipality recognises financial assets using trade date accounting.

Initial measurement of financial assets and financial liabilities

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

The municipality measures a financial asset and financial liability, other than those subsequently measures at fair value, initially at its fair value plus transaction costs that are directly attributable to the acquisition or issue of the financial asset or financial liability.

The municipality measures all other financial assets and financial liabilities initially at fair value.

The municipality first assesses whether the substance of a concessionary loan is in fact a loan. On initial recognition, the municipality analyses a concessionary loan into its component parts and accounts for each component separately. The municipality accounts for that part of a concessionary loan that is:

a social benefit in accordance with the Framework for the Preparation and Presentation of Financial Statements, where it is the issuer of the loan; or

non-exchange revenue, in accordance with the Standard of GRAP on Revenue from Non-exchange Transactions (Taxes and Transfers), where it is the recipient of the loan.

Subsequent measurement of financial assets and financial liabilities

The municipality measures all financial assets and financial liabilities after initial recognition using the following categories:

- Financial instruments at fair value.
- Financial instruments at amortised cost.
- Financial instruments at cost.

All financial assets measured at amortised cost, or cost, are subject to an impairment review.

The amortised cost of a financial asset or financial liability is the amount at which the financial asset or financial liability is measured at initial recognition minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount, and minus any reduction (directly or through the use of an allowance account) for impairment or uncollectibility in the case of a financial asset.

Fair value measurement considerations

If the market for a financial instrument is not active, the municipality establishes fair value by using a valuation technique. The objective of using a valuation technique is to establish what the transaction price would have been on the measurement date in an arm's length exchange motivated by normal operating considerations. Valuation techniques include using recent arm's length market transactions between knowledgeable, willing parties, if available, reference to the current fair value of another instrument that is substantially the same, discounted cash flow analysis and option pricing models. If there is a valuation technique commonly used by market participants to price the instrument and that technique has been demonstrated to provide reliable estimates of prices obtained in actual market transactions, the municipality uses that technique. The chosen valuation technique makes maximum use of market inputs and relies as little as possible on municipality-specific inputs. It incorporates all factors that market participants would consider in setting a price and is consistent with accepted economic methodologies for pricing financial instruments. Periodically, the municipality calibrates the valuation technique and tests it for validity using prices from any observable current market transactions in the same instrument (i.e. without modification or repackaging) or based on any available observable market data.

Short-term receivables and payables are not discounted where the initial credit period granted or received is consistent with terms used in the public sector, either through established practices or legislation.

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

Gains and losses

A gain or loss arising from a change in the fair value of a financial asset or financial liability measured at fair value is recognised in surplus or deficit.

For financial assets and financial liabilities measured at amortised cost or cost, a gain or loss is recognised in surplus or deficit when the financial asset or financial liability is derecognised or impaired, or through the amortisation process.

Impairment and uncollectibility of financial assets

The municipality assesses at the end of each reporting period whether there is any objective evidence that a financial asset or group of financial assets is impaired.

For amounts due to the municipality, significant financial difficulties of the receivable, probability that the receivable will enter bankruptcy and default of payments are all considered indicators of impairment.

Financial assets measured at amortised cost:

If there is objective evidence that an impairment loss on financial assets measured at amortised cost has been incurred, the amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset's original effective interest rate. The carrying amount of the asset is reduced through the use of an allowance account. The amount of the loss is recognised in surplus or deficit.

If, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognised, the previously recognised impairment loss is reversed by adjusting an allowance account. The reversal does not result in a carrying amount of the financial asset that exceeds what the amortised cost would have been had the impairment not been recognised at the date the impairment is reversed. The amount of the reversal is recognised in surplus or deficit.

Where financial assets are impaired through the use of an allowance account, the amount of the loss is recognised in surplus or deficit within operating expenses. When such financial assets are written off, the write off is made against the relevant allowance account. Subsequent recoveries of amounts previously written off are credited against operating expenses.

Financial assets measured at cost:

If there is objective evidence that an impairment loss has been incurred on an investment in a residual interest that is not measured at fair value because its fair value cannot be measured reliably, the amount of the impairment loss is measured as the difference between the carrying amount of the financial asset and the present value of estimated future cash flows discounted at the current market rate of return for a similar financial asset. Such impairment losses are not reversed.

2.30. Derecognition

Financial assets

The municipality derecognises financial assets using trade date accounting. The municipality derecognises a financial asset only when:

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

- the contractual rights to the cash flows from the financial asset expire, are settled or waived;
- the municipality transfers to another party substantially all of the risks and rewards of ownership of the financial asset; or
- the municipality, despite having retained some significant risks and rewards of ownership
 of the financial asset, has transferred control of the asset to another party and the other
 party has the practical ability to sell the asset in its entirety to an unrelated third party, and
 is able to exercise that ability unilaterally and without needing to impose additional
 restrictions on the transfer. In this case, the municipality:
 - derecognises the asset; and
 - recognises separately any rights and obligations created or retained in the transfer.

The carrying amount of the transferred asset is allocated between the rights or obligations retained and those transferred on the basis of their relative fair values at the transfer date. Newly created rights and obligations are measured at their fair values at that date. Any difference between the consideration received and the amounts recognised and derecognised is recognised in surplus or deficit in the period of the transfer.

On derecognition of a financial asset in its entirety, the difference between the carrying amount and the sum of the consideration received is recognised in surplus or deficit.

2.31. Financial liabilities

The municipality removes a financial liability (or a part of a financial liability) from its statement of financial position when it is extinguished - i.e. when the obligation specified in the contract is discharged, cancelled, expires or waived.

An exchange between an existing borrower and lender of debt instruments with substantially different terms is accounted for as having extinguished the original financial liability and a new financial liability is recognised. Similarly, a substantial modification of the terms of an existing financial liability or a part of it is accounted for as having extinguished the original financial liability and having recognised a new financial liability.

The difference between the carrying amount of a financial liability (or part of a financial liability) extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognised in surplus or deficit. Any liabilities that are waived, forgiven or assumed by another entity by way of a non-exchange transaction are accounted for in accordance with the Standard of GRAP on Revenue from Non-exchange Transactions (Taxes and Transfers).

Changes in accounting policies, estimates and errors

Changes in accounting policies due to adoption of newly effective Standards of GRAP have been applied retrospectively in accordance with GRAP 3 requirements, except to the extent that it is impracticable to determine the period-specific effects or the cumulative effect of the change in policy or where allowed transitional provisions had been adopted. In such cases the municipality

Annual Financial Statements for the year ended 30 June 2015

Accounting Policies

would restate the opening. The provisions of IGRAP 1 have been applied prospectively in line with IGRAP.

Inventories

Inventories are initially measured at cost except where inventories are acquired through a non-exchange transaction, then their costs are their fair value as at the date of acquisition.

Subsequently inventories are measured at the lower of cost and net realisable value.

Inventories are measured at the lower of cost and current replacement cost where they are held for; distribution at no charge or for a nominal charge; or consumption in the production process of goods to be distributed at no charge or for a nominal

charge.

Net realisable value is the estimated selling price in the ordinary course of operations less the estimated costs of completion and the estimated costs necessary to make the sale, exchange or distribution.

Current replacement cost is the cost the municipality incurs to acquire the asset on the reporting date.

The cost of inventories comprises of all costs of purchase, costs of conversion and other costs incurred in bringing the inventories to their present location and condition.

The cost of inventories of items that are not ordinarily interchangeable and goods or services produced and segregated for specific projects is assigned using specific identification of the individual costs.

The cost of inventories is assigned using the first-in, first-out (FIFO) formula. The same cost formula is used for all inventories having a similar nature and use to the municipality.

When inventories are sold, the carrying amounts of those inventories are recognised as an expense in the period in which the related revenue is recognised. If there is no related revenue, the expenses are recognised when the goods are distributed, or related services are rendered. The amount of any write-down of inventories to net realisable value or current replacement cost and all losses of inventories are recognised as an expense in the period the write-down or loss occurs. The amount of any reversal of any write-down of inventories, arising from an increase in net realisable value or current replacement cost, are recognised as a reduction in the amount of inventories recognised as an expense in the period in which the reversal occurs.

Post Retirement Healthcare subsidy liability as at 30 June 2015

The economic assumptions for the 30 June 2015 valuation are shown in the table below, and compared to those used for the pravious valuation

Gross Discount rate 9.60% 9.40
--

Rationale for assumptions

GRAP 25 requires the discount rate used in the valuation be determined by reference to market yields on government bonds as at the balance sheet date. In the with GRAP 25 and current marks practises government bond yields are therefore used when setting our best estimated iscount marks practise government bonds shall be consistent with the currency and estimated term of the post-employment benefit obligations. The current bonds shall be consistent with the currency and estimated for the post-employment penefit is as at 30 June 2015. The sentimated discount rate was set to the yids on the ESA zero-coupon yield curve with a term of 17 years, it is expected duration of the liability based on the current membership data, as at 30 June 2015.

Healthcare cost inflation

In the past, halathcarecost inflation has typically exceeded the Consumer Price Index ("CPI") by a margin of 1% to 2%.
The Bond Exchange of South Africa fit a real yield curve on index-linked bonds. This real yield curve is published together with the BESA yield curve on zero-coupon

government bond yeaks which is a norminal yield.

The beas estimate inflation assumption is a norminal yield.

The beas estimate inflation assumption is attendither between the norminal and real yield curves at the point corresponding to the duration of the liability, including a 0,5% inflation risk premium adjustment to meet a epidomace for the current economic environment. In order to be consistent between the point and PHRS valuations, the calcualted inflation assumption for each using above methodology and then calcualted inflation assumption for both valuations. This would result in one best estimate inflation assumption to be used.

A margin of 25% was added to this value to determine the healthcare cost inflation assumption.

The CPI Inflation assumption using the recognition of 2% over CPI inflation.

It is the healthcare cost inflation assumption of 2% over CPI inflation.

Net Discount Rate

The relationship between the gross discount rate and the healthcare cost inflation rate is move important that the inchivitual values. The net discount rate is also a highly significant, assumption in the respective valuations.

The future madical benefits are projected the season and the season and a the gross discount rate and the fresh properties on the relationship between the gross discount rate and, the healthcare cost inflation rates as shown above, the resulting net discounting rate is 0.46% (calculated as (1+discount rate) with the 30 June 2015 valuation.

Withdrawal Assumption

The table below shows the annual withdrawal rate for the current and previous valuation, differentiated by age

	30	June 2016	30.	une 2014
Age	Maies	Females	Males	Females
	%	*	*	%
50	13.30	13,30	13,30	13,30
52	13.30	13,30	13,30	13,30
8	10,90	10.90	10,90	10.90
38	8,20	8.20	8,20	8.20
40	5.80	5.80	[5.80	5.80
45	4.10	4.10	01.4	4.10
93	2.90	2.90	2.90	2.90
59				
99		•		

Assumed retrement age
The assumed retrement age is of 63 years for current employees is based on the normal retrement age of the employer of 65 years for all employees, including allowance
for early retrements. This assumption is in respect of both males and temales.

Spousel and principal member age difference

The assumption that make membersare 3 years older than their female spouses and vice versa. The same assumption was applied at the previous valuation date. Where availablee, the actual age of spouse was used for continuation members.

Child Dependents

No value has been placed on benefits payable to child dependants. The impact is likely to be immaterial and not allowing for child dependants is generally applied by other actuaries in the market place. The same assumption was applied at the previous valuation date.

Percentage Married assumptions

The assumption that 90% of all active members (both male and female) will be married at retirement. For pensioners we have used the actual married which is equal to 100%. This changed from the previous valuation where for pensioners it was also assumed that 90% of pensioners are married.

Below is a summary of the prior year assumptions

The table below shows the married assumption for the valuation in respect of active members currently in service, differentiated by age

		٦	Ē	48	70	8	92	88	86	8
30 June 2014	Females %									
30 Ju	Males %	1	13	48	0.2	18	58	58	98	06
	Age	20	SS	83	35	9	45	8	53	8

Long service Award Valuation

Membership Data

The key features of the membership data used in the current and prior valuation are summarised below.

	30 Ju	30 June 2015		30 June 2014	3 2014
Current Employees	Males	Females	W	Wales	Famales
No. current employees	207	95		201	91
Average age of employees	45	38		42	38
Average years of past service	6	2		6	9
Average annual	153,761	218,593		134	200

The economic assumptions for the 30 June 2015 valuation are shown in the table below, and compared to those used for the previous valuation

30 June 2014 8,50% 9,10%	-0.37%
30 June 2015 8,50% 0	-0,54%
Gross Discount rate Healthcare cost Inflation	Net discount rate

Rationale for economic assumptions

GRAP 25 requires that the discount raie used in the valuation be determined by reference to market yields on government bonds as at the belance sheet date. In line with GRAP 25 and current market practice, government bond yields are therefore used when setting our best-estimate discount raie assumption. The currents and team of the government bonds shall be consistent with the ourrency and estimated term of the employee benefit obligations. The settimated discount raie was set equal to the yield on the BESA zero-coupon yield curve with a term of 9 years, the expected duration of the liability based on the current membeship data, as at 30 June 2015.

Salary Inflation

orans y intellion has typially exceeded the Consumer Price Index ("CPI") by a margin of around 1% to 2%.

The Bond Exchange of South Africa (fitted a real yield curve on the index-linked bonds. This real yield curve is published together with the BESA yield curve on zero-coupon government.

The Bond yields, which is a northinal yield curve.

The adversarial price and are consisted as the refore used to determine the inflation assumption, as this provides more accurate information on the outlook on inflation at specific durations.

Therefore, the best estimate inflation assumption is calculated as the difference between the norminal and real yield curves at the point corresponding to the duration of the liability, including a 0.5% Inflation.

risk premium adjustment to make appropriate allowance for the current economic environment. A margin of 2% was added to this value to determine the salary inflation assumption.
The CPI Inflatio assumption using their methodology is 6.3% as at 30 June 2015 based on a cluration of 17 years. The duration was derived as the combined weighted duration of the long service award and post-ettlement healthcare subsety, liabilities as at 30 June 2015. Thus, the salary inflation has been est as 8.90% at the valuation date, after allowing for a margin of 2% over CPI inflation.
The same methodology was followed for the 30 June 2014 salary inflation rate.

Net Discount Rate
The relationship between the gross discount rate and satary inflation rates are more important that their individual values. The net discount rate is also highly significant assumption in the respective valuations in the respective valuation rate and discount rate at the gross discount rate. This is equivalent to discounting the benefits at their current level at the net discount rate.
The net discount rate herefore depends on this -disklorability between the gross discount rate and the selany inflation rate selany inflation rate as shown above, the resulting net discounting rate is 0.37% (calculated as (1+discount rate) inflation rates as shown above, the resulting net discounting rate is 0.37% (calculated as (1+discount rate)/(1+salary inflation rates as shown above, the resulting net discounting rate is 0.37% (calculated as (1+discount rate)/(1+salary inflation rates as shown above, the resulting net discounting rate is 0.37% (calculated as (1+discount rate)/(1+salary inflation rates as shown above, the resulting net discounting rate is 0.37% (calculated as (1+discount rate)/(1+salary inflation rates as shown above, the resulting net discounting rate is 0.37% (calculated as (1+discount rate)/(1+salary inflation rates).

Summary of demographic assumptions for the 30 June 2015 valuation are in the tables below

			өг уөаг
Pre-rettrement mortality	Withdrawal	Assumed retirement age	Number of trading days p

30 June 2014	SA85-90L	w see table below	63 yrs Fernale and Males	250
30 June 2015	SAB5-90L	see table below	63 vrs Female and Males	950

Pre-retinement mortality
The above lable most commonly used in the retinement industry (for similar sub-populations in South Africalysis SA 85-90 (Light). The same assumption was applied at the previous valuation date.

Withdrawal assumptions

The table below shows the annual withdrawal rates for the valuation, differentiated by age.

30 June 2015 Fernales %	13,30	13,30	10.90	B,20	5.80	4.10	2,90		•
30 June Makes	13.30	13.30	10.90	8.20	5,80	4,10	2.90	•	•
Age	20	52	8	36	8	45	20	路	90

Assumed retirement age
The assumed retirement age of 63 for current employaes is based on the normal retirement age of the employeer of 65 years for all employees, including allowance for early retirements
The assumptions is in respect of males and females and was also applied at the previous valuation date.

Number of trading days The assumption that the number of trading days in the current was 252 days. The assumption was applied at the previous valuation date.

Benefit Rules

The valuation has been performed on the basis of the following benefit rules applied:

In addition to normal vacation leave, an employee shall qualify for the following additional leave as recognition for continuous service at the completion of the following:

Summary of LSA Benefits

The Municipality is leasing 18 copiers from Xerox and monthly rental expense has been accounted for in the statement of financial performance. The average lease term is 5 years and the average secastation rate is 10%. The secatation is fixed for the duration of the contract. No arrangements have been entered into for contingent net obligation under operating lease are secured by the lessor's title to the leased asset.

30. Contingencies
Claim for damage - Endument Municipality
The municipality received cox expondence dated 25 October 2010 copied to the Auditor-General, MEC for Local
Government Provincial and National Treasury from Endumeni Municipality serving a notice in terms of section 41 (2) of the Intergovernmental relations framework Act 13 of 2005
relating to the failure of Umzinyalth to facilitate the transfer of assets and liabilities to the value of R 6 825 512 and final demand for payment of an outstanding amount of R17 086 623.59
for operational expenditure incurred by endumeni Municipality on behalf of Umzinyalth IDM for water services chronion. Endumeni Municipality intends to take fegal actions should this matter internal nurreceived
However when audit was conducted by Gobodo, it was found that the social amount owed is R 15 897 119.61 not R 17 088
623.59. The R 6 626 612 was the original capital foan amount, but went up to R 16 997 119.61 (R 8 370 507.61 included of capital charges)
Umzinyathi Disuxe Municipality as sheapy been willing to receive this matter but i Annount as per Uthukels Water (Pty) Ltd
documents intom Endument Municipality in their claim which was submitted on the 22 Cotober 2010.
Umzinyathi District Municipality part their claim which was submitted on the 22 Cotober 2010.
Umzinyathi District Municipality and Municipality and R4 227 407.51 for internal loans still in dispute. The matter was
was resolved with Endument Municipality whem to date has failed to submit a written confirmation of writing off the account. This matter has been resolved as per council resolution
received from Endument Municipality whem to date has failed to submit a written confirmation of writing off the account. This matter has been resolved as per council resolution
received from Endument Municipality

uThukela Water

ui numers water
There's a dispute of an amount of R43 400 474 between uThukela water and the Municipality as uThukela water cialms that the municipality owes an amount of R110 734 609 but can only prove an amount of R87 334 135

Legal Matters pending
There are 5 litigations and claims pending against the municipality

2 015 20 607 011 2 014

Umzinyathi District Municipality v Consultant

Consultant was appointed as a consultant and one of the objectives of the contract was that the consultant source funding for the project.

The consultant did not meet those objectives therefore the municipality cancelled the contract which then led to the dispute.

Umzinyathi District Municipality v Supplier
Supplier claims compensation payment of compensation against Umzinyathi for defamation
Note
Plantilf has offered settlement of this matter on the basis that each party pays its own costs.

Umzinyethi District Municipality v Supplier
The consultant underperformed with a project at eQhudeni and the municipality cancelled the contract hence the disputed arised from the contract.

Umalnysthi District Municipality v Supplier
Supplier provided seconomodation for bodyguards as per contract however the municipality cancelled the contract
with the security company and therefore the company claims that the municipality should have continued with the contract.

35. Risk management

35. The retailingment. Liquidity risk or liquidity is a result of the funds available to cover future commitments. The municipality manages liquidity risk through an ongoing review of future commitments and credit facilities.
Credit risk

Credit risk
Credit risk
Credit risk consists mainly of cash deposits, cash equivalents, derivative financial instruments and trade debtors. The
municipality only deposits cash with major banks with high quality credit standing and limits exposure to any one counter-party.
Trade recel-inholes comprise a widespread outcomer base. Management evaluated credit risk relating to customers on an
origing basis. If outsomers are independently rested, these ratings are used. Otherwise, if there is no independent rating, risk control assesses the credit quality of the customer, taking into account its financial position,
past experience and other factors. The utilization of credit limits regularly monitored. Sales to retail customers are settled in cash.
Financial assets exposed to credit risk at year and were as follows:

38. Going concern
The annual financial statements have been prepared on the basis of accounting policies applicable to a going concern. This
basis presumes that funds will be available to finance future operations and that the realisation of assets and settlement of liabilities, contingent obligations and commitments will occur in the ordinary course of business.

37. Events after the reporting date
The post for the CFO was re-adventised as the Municipality did not find a suitable qualified candidate to fill the post. The new MM has been appointed and is assuming his duties on the 1st of September 2015

Umzinyathi District Municipality is mostly dominated with rural arears

Total water loss for the period ended 30 June 2015

Water Loss %

Most of our rural arears have stand pipes per standards set by Water Affairs. Other nural have no water infrastructure thus water tankers are delivering water to them and these tankers are getting water

from our plants and collection point sets in our water network

We experienced a lot of burst pipes in our reticulation line due to aging infrastructure.

We experienced a lot of burst pipes in our reticulation line due to aging infrastructure.

Illegal connections in most of our rural areas have huge impact in unaccounted water as they are most metered.

We experienced a lot of burst pipes in our reticulation line due to drought.

We have expirienced a lot of memal leaks from domestic consumers and there's a programme that we are

running to fix these leaks

40. Pelated Parties Uthukela Water (Pty) Ltd is considered a related party due to the fact that Umzinyathi District Municipality has a 33,3% shareholding. Uthukela Water (Pty) Ltd supplies Umzinyathi District Municipality with bulk water. This includes both raw and portable water.

43. Transfer of Functions Between Entities Not Under Common Control

Uthukela Water (Pty) Ltd is an entity of three WSA's, namely Amajuba DM, Newcastle LM and Umzinyathi DM. The interest in this joint venture is at 33.3%, 34,3% and 33,3% respectively. The voing rights are represented by the percentage shareholding in the entity. The transfer of function was initiated by the directive from the MEC: COGTA. It stipulated that the function, including the infrastructure assets must be transferred back to the WSA's. The process was started and completed by the 30 June 2014, This arrangement is currently in place. Refer to note 9 for further details.
